Introduced in 1953, the DB3S represented a triumph over adversity for Aston Martin. It was conceived in the wake of the unsuccessful DB3 that the company introduced in 1951. The DB3 was designed by Robert Eberan von Eberhorst, the noted Austrian engineer who, pre war, had designed the Auto Union Type D Grand Prix car. Von Eberhorst ' s brief was to produce a car that would be quick enough to give the Aston Martin Lagonda ' s straight-six (designed by W O Bentley) a chance of outright wins.

EJ ' Ted ' Cutting was not only Aston Martin ' s most successful Chief Race Car Design Engineer, but was also an innovator with influential force on the worldwide automotive industry. Originating from a limited edition hardback version, this eBook was produced in celebration of the 60th anniversary of Aston Martin winning the World Sports Car Championship for Britain with the all-conquering DBR1 designed, engineered and created by Ted himself. Rather than a traditional biography of his life, Ted wanted his book to be rather less scripted and informal; it was therefore initially adapted from a number of recorded conversations between himself and Aston Martin Heritage Trust members Stuart Bailey and Brian Joscelyne - the title being an obvious choice considering this! In addition to the in-depth telling of a legendary period in British motorsport by a man at the centre of it all, the book also sees Ted clarify a number of details which have in the past been incorrectly reported. Unusually it also contains all his published documents and access to a 90 minute video of his unique lecture on ' Racing Astons ' to further endorse his story. Although the original hardback edition of this book was produced only in a limited run, Ted ' s wish was to make the complete book available to a much wider audience, now possible through the internet; as an engineer always working at the cutting edge of technology, he would appreciate the benefits of information sharing in the digital age. As well as being of interest to fans of Aston Martin and of motorsports in general, the book is a compelling read for any student of automotive design and engineering; after all, progress is about standing on the shoulders of giants -
