What does it take for a volcanic eruption to really shake the world? Did volcanic eruptions extinguish the dinosaurs, or help humans to evolve, only to decimate their populations with a super-eruption 73,000 years ago? Did they contribute to the ebb and flow of ancient empires, the French Revolution and the rise of fascism in Europe in the 19th century? These are some of the claims made for volcanic cataclysm. Volcanologist Clive Oppenheimer explores rich geological, historical, archaeological and palaeoenvironmental records (such as ice cores and tree rings) to tell the stories behind some of the greatest volcanic events of the past quarter of a billion years. He shows how a forensic approach to volcanology reveals the richness and complexity behind cause and effect, and argues that important lessons for future catastrophe risk management can be drawn from understanding events that took place even at the dawn of human origins.

Biotechnology is one of the major technologies of the twenty-first century. Its wide-ranging, multi-disciplinary activities include recombinant DNA techniques, cloning and the application of microbiology to the production of goods from bread to antibiotics. In this new edition of the textbook Basic Biotechnology, biology and bioprocessing topics are uniquely combined to provide a complete overview of biotechnology. The fundamental principles that underpin all biotechnology are explained and a full range of examples are discussed to show how these principles are applied; from starting substrate to final product. A distinctive feature of this text are the discussions of the public perception of biotechnology and the business of biotechnology, which set the science in a broader context. This comprehensive textbook is essential reading for all students of biotechnology and applied microbiology, and for researchers in biotechnology industries.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

There have been major changes to mental health services internationally in recent years revolving around the concept of care in the community. Although speed of change and precise service mechanisms differ between countries there is nevertheless increasingly widespread consensus on key components essential to adequate care provision. This in turn provides an opportunity to develop a widely acceptable model framework to direct future developments. There is certainly still room for reform in recognition of specific needs and improvements in treatment and care intervention. This book proposes a simple model which can be used as a guide to increased clinical effectiveness through focused evidence-based reform. Using a time/space framework, it is intended to act as a practical aid to diagnosis of strengths and weaknesses in services that will be used by care providers, trainees and planners both at local and higher levels.

Focuses on style for those publishing in the scientific disciplines, including citations, abbreviations, and capitalization

On April 12, 1945, Franklin Roosevelt died and Harry Truman took his place in the White House. Historians have been arguing ever since about the implications of this transition for American foreign policy in general and relations with the Soviet Union in particular. Was there essential continuity in policy or did Truman's arrival in the Oval Office prompt a sharp reversal away from the approach of his illustrious predecessor? This study explores this controversial issue and in the process casts important light on the outbreak of the Cold War. From Roosevelt to Truman investigates Truman's foreign policy background and examines the legacy that FDR bequeathed to him. After Potsdam and the American use of the atomic bomb, both which occurred under Truman's presidency, the U.S. floundered between collaboration and confrontation with the Soviets, which represents a turning point in the transformation of American foreign policy. This work reveals that the real departure in American policy came only after the Truman administration had exhausted the legitimate possibilities of the Rooseveltian approach of collaboration with the Soviet Union.

This 2000 book provided the first detailed exposition of the mathematical theory of boundary integral equations of the first kind on non-smooth domains.

This engaging volume for the general reader explores how individuals and societies remember, forget and commemorate events of the past. The collection of eight essays takes an interdisciplinary approach to address the relationships between individual experience and collective memory, with leading experts from the arts and sciences. We might expect scientists to be concerned with studying just the mental and physical processes involved in remembering, and humanities scholars to be interested in the products of memory, such as books, statues and music. This collection exposes the falseness of such a dichotomy, illustrating the insights into memory which can be gained by juxtaposing the complementary perspectives of specialists venturing beyond the normal boundaries of their disciplines. The authors come from backgrounds as diverse as psychoanalysis, creative writing, neuroscience, social history and medicine.

Written for graduate students, as well as researchers and practising engineers working with composite materials.

This introductory account of commutative algebra is aimed at advanced undergraduates and first year graduate students. Assuming only basic abstract algebra, it provides a good foundation in commutative ring theory, from which the reader can proceed to more advanced works in commutative algebra and algebraic geometry. The style throughout is rigorous but concrete, with exercises and examples given within chapters, and hints provided for the more challenging problems used in the subsequent development. After reminders about basic material on commutative rings, ideals and modules are extensively discussed, with applications including to canonical forms for square matrices. The core of the book discusses the fundamental theory of commutative Noetherian rings. Affine algebras over fields, dimension theory and regular local rings are also treated, and for this second edition two further chapters, on regular sequences and Cohen-Macaulay rings, have been added. This book is ideal as a route into commutative algebra.
