The Human Body: Linking Structure and Function provides knowledge on the human body's unique structure and how it works. Each chapter is designed to be easily understood, making the reading interesting and approachable. Organized by organ system, this succinct publication presents the functional relevance of developmental studies and integrates anatomical function with structure. Focuses on bodily functions and the human body's unique structure Offers insights into disease and disorders and their likely anatomical origin Explains how developmental lineage influences the integration of organ systems

****This is the chapter slice "The Muscular System - Movement" from the full lesson plan "Cells, Skeletal & Muscular Systems"**. What do cells, bones and muscles have in common? They are all part of the human body, of course! Our resource takes you through a fascinating study of the human body with current information written for remedial students in grades 5 to 8. We warm up with a look at the structures and functions of cells, including specialized cells. Next, we examine how cells make up tissues, organs and organ systems. Then the eight major systems of the body are introduced, including the circulatory, respiratory, nervous, digestive, excretory and reproductive systems. Then on to an in-depth study of both the muscular and skeletal systems. Reading passages, activities for before and after reading, hands-on activities, test prep, and color mini posters are all included. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy and STEM initiatives.**

Provides an introduction to the functions of the human body, including vital information on the musculoskeletal system, the nervous system, the circulatory system, and the digestive system.

Connect students in grades 5 and up with science using Understanding the Human Body. This 80-page book presents basic information about the complex human body without overwhelming students with medical jargon. It makes the study of the human body even more fascinating with Far Out Facts, fun tidbits of information that keep students on their toes. The book includes a number of Web sites that provide students the opportunity to further explore various body systems and concepts. This book supports National Science Education Standards.

A bold, accessible, illustrated guide that delivers real scientific information on how the body works with a healthy side of fun facts and trivia. If you've ever searched the Internet for information on that odd rash on your arm, advice to help you get the best night's sleep, or tips for staying healthy during cold and flu season, you know there is skill to sorting fiction from scientific fact. How the Body Works uses clear, easy-to-understand graphics and illustrations to demystify all the complex processes that keep our bodies alive and thriving -- from the basic building blocks of the body, our cells -- to skin, muscles, and bones and the ways in which our many parts work together. Learn about the senses, how we read faces and body language, nutrition and immunity, the brain, sleep, memory, dreams, and much more. Each chapter takes you through a new body system and includes surprising facts like "there are no muscles in the fingers and toes" and "by the time you finish reading this sentence, 50 million of your cells will have died and been replaced." With How the Body Works, you'll understand the how and why as well as be wowed by the astonishing ways our bodies work.

Reinforce your understanding of the concepts in Patton and Thibodeau's The Human Body in Health & Disease, 6th Edition! Corresponding to the chapters in the text, this study guide reviews essential medical terminology, concepts and processes related to the anatomy and physiology of the human body, and body function in health and disease. A variety of exercises make it easy to review and apply key concepts, and labeling of anatomy drawings helps you learn anatomical structures and terminology. UPDATED! Did You Know? provides fun, interesting facts on A&P topics. A brief synopsis at the beginning of each chapter previews core concepts that will be covered. Crossword Puzzle, Unscramble and Word Find activities help you learn new vocabulary terms and their proper spelling. Diagrams and labeling exercises reinforce your understanding of where the structures of the body are located. Answers to exercises are located in the back of the study guide, along with page-number references to the textbook. NEW! Know Your Medical Terms exercises help you learn and understand the various word parts used in medical terminology, as presented in the new Language of Science and Language of Medicine word lists in the textbook. Matching and fill-in-the-blank exercises enhance your comprehension of chapter content. Application questions develop your critical thinking skills and help you apply information to real-world scenarios.

Introduces each of the eleven organ systems of the human body, noting the physiological processes, cell and tissue types, and the role each organ plays within the larger system.
