Wave speed: Depends on the medium in which the wave is traveling. It varies in solids, liquids and gases. A mathematical way to calculate wave speed is:  $\text{wave speed} = \text{wavelength (in m)} \times \text{frequency (in Hz)}$ . Or,  $v = f \times \lambda$ . So, if a wave has a wavelength of 2 m and a frequency of 500 Hz, what is its speed? (Answer:  $\text{wave speed} = 2 \text{ m} \times 500\text{Hz} = 1000 \text{ m/s}$ )

Answer: E. This is another boundary behavior question with a mathematical slant to it. The frequency of the incident and transmitted waves are always the same. Thus, use  $f = v/w$  to find the frequency of the incident wave - 2.2 Hz. The frequency of the transmitted wave is also 2.2 Hz, the wavelength is 3.0 m, and so the speed is  $f \cdot w = 6.6$  m/s.
