Nutritional anthropology is the study of the interplay between human biology, economic systems, nutritional status and food security. If economic and environmental changes in a community affect access to food, food security, and dietary health, then this interplay between culture and biology is in turn connected to broader historical and economic trends associated with globalization. Nutritional status affects overall health status, work performance potential, and the overall potential for econo

Anthropology of Food and Nutrition Ser.: Consuming the ...

Throughout human history nutrition has been shaped by political, economic, and cultural forces, and in turn, access to food and nutrition has altered the course and direction of human societies. Using a biocultural approach, the contributors to this volume investigate the ways in which food is both an essential resource fundamental to human health and an expression of human culture and society.
