Enterprise Resource Planning (ERP) systems have become one of the main prerequisites and a strong and integrated IT infrastructure for many companies enabling them to compete and to gain a competitive advantage in the local and global marketplace. ERP systems are considered as the backbone for e-business as well as for the whole supply chain, particularly for those companies that undertake online business transactions. Supply Chain Management Performance and ERP Implementation is unique in its breadth of coverage the impact of ERP systems functionality on Supply Chain Management (SCM)

This book capitalizes on two hot topics: the Low Carbon Emission Development Strategies and climate change in Asian cities. There is resurgence in making policies to investigate more aspects of the energy-environment spectrum for the global energy market in the future. This book helps the policy makers and researchers to understand which actions should be taken to reduce the environmental impacts of economic activities in different regions in Asia. The clean energy strategy proposed in this book refers to the development and implementation of policies and strategies that simultaneously contribute to addressing climate change and solving local environmental problems, which also have other development impacts. It provides insights to a wide audience on successful ways to promote, design and implement the clean energy policies in Asian cities. To determine the global actions, it is necessary to make breakthroughs by promoting further research and to present scenarios that achieve Low Emission Development Strategies (LEDS) goals without dependence upon fossil fuels. The scenarios and case studies discussed in this book are helpful to plan for the SDGs, where various objectives have to be achieved at the same time. The UN 2030 development agenda needs innovative planning to achieve multiple goals with limited resources and generate synergy among sectors. This book will be one of the first books available on this subject.
