While historians are unsure about the truth of the Eureka legend, it is certain that Archimedes discovered the principle of buoyancy: an object immersed in a fluid experiences an upward force equal to the weight of the displaced fluid. Students can explore this law in the Archimedes ' Principle Gizmo. In the Gizmo, students can vary the dimensions and mass of a " boat, " see how this affects the buoyant forces on the boat, and determine whether the boat floats or sinks.

Place weights into a boat and see how far the boat sinks into a tank of liquid. The depth of the boat can be measured, as well as the amount of liquid displaced. The dimensions of the boat and the density of the liquid can be adjusted. See how much weight the boat can hold before it sinks to the bottom!
