This book provides a complete introduction to plumbing services. It explains the principles and provides practical examples of the planning, design, installation and maintenance of the plumbing technologies applicable to single-storey buildings, skyscrapers and everything in between. The book begins with an introduction to plumbing technology, the trade and its evolution. Chapters then cover: Pipes, fittings and accessories and their installation and testing Pumps and pumping systems Hydraulic principles Hot and cold water supply systems Fixtures and appliances Sanitary and storm drainage systems Special concerns such as seismic issues, safety, security and the state of the art. Written and the figures drawn by a registered professional engineer and experienced teacher, this book is suitable for use on a wide range of courses from building services engineering, civil engineering, construction technology, plumbing services, environmental engineering, water engineering and architectural technology.

Here is a wealth of plumbing essentials for engineers, architects and plumbing professionals. Each chapter is written by an expert on the specific subject at hand. All aspects of plumbing engineering and design are covered - from the basics of water quality, treatment, supply, distribution and pressure - to the more sophisticated advances in earthquake protection and cross-connection control. More than nineteen chapters cover such important topics as piping insulation, water pumps, testing water systems, protecting water supply systems, fire sprinklers and storm water drainage systems.

Complete and current coverage of site piping systems for facilities Featuring the latest codes and standards, this detailed resource discusses the design of facility piping systems that are installed on the site beyond the building wall. This is a comprehensive guide to the identification, measurement, transport, and disposal of various kinds of waterborne waste as well as to the supply of water and natural gas to facilities. Water conservation and reuse are also addressed. Written by a global expert in the field, this book provides the most up-to-date criteria and methods for the design of commercial, industrial, and institutional site facility systems. Facilities Site Piping Systems Handbook covers: Water wells Graywater Groundwater monitoring wells Water treatment Desalination Site domestic water service Site fire protection Site fuel gas systems Fats, oils, and grease interceptors, and motor oil separation units pH neutralization systems Infectious and biological waste drainage systems Nuclear waste Industrial waste Fire suppression water drainage Volatile liquids: treatment and disposal Stormwater harvesting and reuse Stormwater drainage and disposal Flow in ditches and open channels Sanitary gravity flow Pump discharge systems Underground piping design Freezing prevention of water and wastewater in exterior pipes and tanks Building rating and assessment systems
