"Bats Sing, Mice Giggle" tracks many years of research by hundreds of scientists that reveals how wild animals, as well as pets, have inner, secret lives of which until recently - although many animal lovers will have instinctively believed it - we have had little proof. The authors show how animal 'friends' stay in touch, and how they warn and help each other in times of danger; how some animals problem-solve as or in some instances even more effectively than humans - and how they regulate, create, and entertain themselves and others. They show how animals express grief and reverence in ways we never thought possible. From the sleep patterns of some owls, birds and horses, as well as porpoises, who go to sleep in only one half of their brains at a time; to how schools of electric fish give off complex signals of one frequency to communicate with their mates and another frequency to locate their prey, and how Polar bears tune into quantum 'radio stations' to sense prey as far away as ten miles and under the snow, "Bats Sing, Mice Giggle" provides an unparalleled insight into animals' secret lives.

Did you know that bats compose their own songs and babble to each other? Or that mice giggle when they are tickled? That lizards do push-ups to seduce a mate, or that elephants mimic the sounds of passing trucks to stave off loneliness? "Bats Sing, Mice Giggle" is the culmination of many years of research that reveals how wild animals, as well as pets, have secret, inner lives of which until recently - although animal lovers will have instinctively believed it - we have had little proof. The authors show how animal friends keep in touch, and how they warn and help each other in times of danger; how some animals problem-solve even more effectively than humans - and how they build, create, and entertain themselves and others. Shanor and Kanwal reveal the sleep patterns of dolphins, who go to sleep in only one half of their brains at a time; and how schools of electric fish generate and use complex electric fields to determine their location within the group. They show how animals express grief, joy, anger and fear, and experience a similar breadth of emotions as we humans. "Bats Sing, Mice Giggle" is a unique, eye-opening voyage of discovery through animals inner lives - one which emphasizes just how animal we humans are.

'The ordinary becomes extraordinary in this fascinating book'

Explores the future predictions of cutting-edge scientists, spiritual teachers, and other visionaries and how we can affect the future • Shares insights from the author 's discussions with Dr. Mehmet Oz, Raymond Moody, Larry Dossey, John Perkins, Michael Cremo, Gay Bradshaw, Ray Kurzweil, and many others • Examines what these visionary thinkers foresee for humanity based on current trends in medicine, science, agriculture, history, and other disciplines • Reveals how consciousness affects evolution and Earth ' s future For almost three decades Zohara Hieronimus has interviewed spiritual teachers, cutting-edge scientists, ancient wisdom keepers, laboratory-tested psychics, and other visionaries on their predictions for the near and far future. While the methods they use are significantly diverse, the similarities in their forecasts are striking. And, as Hieronimus reveals, one common theme resonates through them all: the power of human consciousness. Sharing insights from her discussions with Dr. Mehmet Oz, Raymond Moody, Larry Dossey, John Perkins, Michael Cremo, Gay Bradshaw, Ray Kurzweil, and many others, Hieronimus explores what these visionary thinkers foresee for humanity based on current trends in medicine, science, agriculture, Earth history, robotics, and spirituality. She examines natural, extraterrestrial, and man-made events that dramatically altered humanity ' s course in the past or might in the future, revealing a recurring cycle of catastrophic Earth changes and rebirths of civilization over billions of years. The author explains that, as part of the energetic expression of Divinity, we can influence the impact of Earth changes through our actions and intentions. She shows that the consciousness of humanity has the power to affect evolution, enact healing on personal and global levels, and alter even natural systems such as the weather. By studying predictions across a broad range of disciplines--from nano-technology to plant intelligence--from today ' s great minds and from ancient spiritual traditions, Hieronimus shows that we can significantly improve the long-term welfare of the Earth by unfolding our nonlocal consciousness, adopting a reverent attitude toward all life, and realizing how we do things is as vital as what we do.

From an expert in animal consciousness, a book that will turn the fly on the wall into the elephant in the room. After reading

Super Fly, you will never take a fly for granted again. Thank you, Jonathan Balcombe, for reminding us of the infinite marvels of everyday creatures. --Sy Montgomery, Author of How to Be a Good Creature For most of us, the only thing we know about flies is that they're annoying, and our usual reaction is to try to kill them. In Super Fly, the myth-busting biologist Jonathan Balcombe shows the order Diptera in all of its diversity, illustrating the essential role that flies play in every ecosystem in the world as pollinators, waste-disposers, predators, and food source; and how flies continue to reshape our understanding of evolution. Along the way, he reintroduces us to familiar foes like the fruit fly and mosquito, and gives us the chance to meet their lesser-known cousins like the Petroleum Fly (the only animal in the world that breeds in crude oil) and the Chocolate Midge (the sole pollinator of the Cacao tree). No matter your outlook on our tiny buzzing neighbors, Super Fly will change the way you look at flies forever. Jonathan Balcombe is the author of four books on animal sentience, including the New York Times bestselling What A Fish Knows, which was nominated for the PEN/E.O. Wilson Award for Science Writing. He has worked for years as a researcher and educator with the Humane society to show us the consciousness of other creatures, and here he takes us to the farthest reaches of the animal kingdom.

Explores the powers and wisdom of sacred White Spirit Animals • Looks in-depth at the lessons of the major White Spirit Animals: the White Bear, White Lion, White Elephant, White Wolf, and White Buffalo • Explains how to use shamanic dreaming and trans-species telepathy to communicate with these great spiritual teachers • Reveals how White Spirit Animals are calling humanity to restore balance, respect, reverence, and honor to protect our animal kin, ourselves, and the earth Beautiful rarities of nature, all-white animals are held sacred by many indigenous cultures and offer deep wisdom to all who will listen. In addition to the White Buffalo, there are other revered white animals, such as the White Wolf, White Lion, White Elephant, and White Bear. Each of these White Spirit Animals belongs to a species at the apex of their ecosystem, meaning the environment in which they live will unravel without them. Speaking through ancient and modern prophecy and the many humans who communicate with them, these White Spirit Animals are urgently calling to humanity to restore balance and protect our animal kin, ourselves, and the earth. Combining sacred elder lore, science, and her own telepathic dreams, Zohara Hieronimus looks at the special role played by White Spirit Animals in spiritual traditions and prophecy around the globe, where they are seen as guardians of animal wisdom, each with a special purpose and gift. She reveals how they have collaborated with humanity since the last ice age, inspiring spiritual practices and conferring shamanistic powers, and are considered the stewards of the great spiritual transformations that occur during transitional times. Sharing the waking vision of White Spirit Animals that called her to write this book, and their message of CPR for the earth--conservation, preservation, and restoration--she explains how to use shamanic dreaming and trans-species telepathy to communicate with these great spiritual teachers. Exploring each one of the major White Spirit Animals--White Buffalo, White Lion, White Elephant, White Wolf, and White Spirit Bear--and the cultures in which they are honored, the author shows, for example, how the White Buffalo is called a harbinger of peace and abundance by many Native American tribes and the White Bear, the great earth healer, teaches us about nurturance and patience. As a bridge between the spiritual and physical worlds, between humans and animals, White Spirit Animals are calling us to open our hearts to the wild, to the sacredness of the wind, the water, the earth, and dream a new world into being to heal our own

personal and collective wounds and restore the earth to balance.

The book is the first of its kind to draw together in conversation the views of the early Church, contemporary biblical and theological scholarship, and post-conciliar teachings. Steck develops a comprehensive, Catholic theology of animals based on an in-depth exploration of Catholicism's fundamental doctrines—trinitarian theology, Christology, pneumatology, eschatology, and soteriology. *All God's Animals* makes two central claims. First, we can hope that God will include animals of the present age in the kingdom inaugurated by Christ. Second, because of this inclusion, our responses to animals should be guided by the values of the kingdom. As Christians await the final liberation of all creation, they are to be witnesses to God's kingdom by embodying its ideals in their relations with animal life. Because the kingdom's fullness is yet to come and because our world remains marked by the wounds of sin, however, Christian treatment of animals will at times require acts that are at odds with the kingdom's ideals (for example, those causing suffering and death). Steck examines each of these ideas and explores all of their complexities.
