Nearly 3% of the world's population no longer live in the country where they were born. George Borjas synthesizes the theories, models, and econometric methods used to identify the causes and consequences of international labor flows, and lays out with clarity a full spectrum of topics with crucial implications for framing debates over immigration.

A comprehensive graduate-level text and professional reference covering all aspects of labor economics.

From “ America ’ s leading immigration economist ” (The Wall Street Journal), a refreshingly level-headed exploration of the effects of immigration. We are a nation of immigrants, and we have always been concerned about immigration. As early as 1645, the Massachusetts Bay Colony began to prohibit the entry of “ paupers. ” Today, however, the notion that immigration is universally beneficial has become pervasive. To many modern economists, immigrants are a trove of much-needed workers who can fill predetermined slots along the proverbial assembly line. But this view of immigration ’ s impact is overly simplified, explains George J. Borjas, a Cuban-American, Harvard labor economist. Immigrants are more than just workers—they ’ re people who have lives outside of the factory gates and who may or may not fit the ideal of the country to which they ’ ve come to live and work. Like the rest of us, they ’ re protected by social insurance programs, and the choices they make are affected by their social environments. In *We Wanted Workers*, Borjas pulls back the curtain of political bluster to show that, in the grand scheme, immigration has not affected the average American all that much. But it has created winners and losers. The losers tend to be nonmigrant workers who compete for the same jobs as

immigrants. And somebody ' s lower wage is somebody else ' s higher profit, so those who employ immigrants benefit handsomely. In the end, immigration is mainly just another government redistribution program. " I am an immigrant, " writes Borjas, " and yet I do not buy into the notion that immigration is universally beneficial. . . . But I still feel that it is a good thing to give some of the poor and huddled masses, people who face so many hardships, a chance to experience the incredible opportunities that our exceptional country has to offer. " Whether you ' re a Democrat, a Republican, or an Independent, *We Wanted Workers* is essential reading for anyone interested in the issue of immigration in America today.

Since the 1970s, the striking increase in immigration to the United States has been accompanied by a marked change in the composition of the immigrant community, with a much higher percentage of foreign-born workers coming from Latin America and Asia and a dramatically lower percentage from Europe. This timely study is unique in presenting new data sets on the labor force, wage rates, and demographic conditions of both the U.S. and source-area economies through the 1980s. The contributors analyze the economic effects of immigration on the United States and selected source areas, with a focus on Puerto Rico and El Salvador. They examine the education and job performance of foreign-born workers; assimilation, fertility, and wage rates; and the impact of remittances by immigrants to family members on the overall gross domestic product of source areas. A revealing and original examination of a topic of growing importance, this book will stand as a guide for further research on immigration and on the economies of developing countries.

The papers in this volume present an excellent sampling of the best of current research in labor economics, combining the most sophisticated theory and econometric methods with high-quality data on a variety of problems. Originally presented at a Universities-National Bureau Committee for Economic Research conference on labor markets in 1978, and not published elsewhere, the thirteen papers treat four interrelated themes: labor mobility, job turnover, and life-cycle dynamics; the analysis of unemployment compensation and employment policy; labor market discrimination; and labor market information and investment. The Introduction by Sherwin Rosen provides a thoughtful guide to the contents of the papers and offers suggestions for continuing research.

The U.S. took in more than a million immigrants per year in the late 1990s, more than at any other time in history. For humanitarian and many other reasons, this may be good news. But as George Borjas shows in *Heaven's Door*, it's decidedly mixed news for the American economy--and positively bad news for the country's poorest citizens. Widely regarded as the country's leading immigration economist, Borjas presents the most comprehensive, accessible, and up-to-date account yet of the economic impact of recent immigration on America. He reveals that the benefits of immigration have been greatly exaggerated

and that, if we allow immigration to continue unabated and unmodified, we are supporting an astonishing transfer of wealth from the poorest people in the country, who are disproportionately minorities, to the richest. In the course of the book, Borjas carefully analyzes immigrants' skills, national origins, welfare use, economic mobility, and impact on the labor market, and he makes groundbreaking use of new data to trace current trends in ethnic segregation. He also evaluates the implications of the evidence for the type of immigration policy that the U.S. should pursue. Some of his findings are dramatic: Despite estimates that range into hundreds of billions of dollars, net annual gains from immigration are only about \$8 billion. In dragging down wages, immigration currently shifts about \$160 billion per year from workers to employers and users of immigrants' services. Immigrants today are less skilled than their predecessors, more likely to require public assistance, and far more likely to have children who remain in poor, segregated communities. Borjas considers the moral arguments against restricting immigration and writes eloquently about his own past as an immigrant from Cuba. But he concludes that in the current economic climate--which is less conducive to mass immigration of unskilled labor than past eras--it would be fair and wise to return immigration to the levels of the 1970s (roughly 500,000 per year) and institute policies to favor more skilled immigrants.
