This inspiring exploration of the range of options for a "library of things" collection demonstrates what has been implemented successfully and offers practical insights regarding these nontraditional projects, from the development of concepts to the everyday realities of maintaining and circulating these collections. • Documents the plan and launch phases of nontraditional collections that will help readers who are entertaining the idea of starting their own "things" project • Explains how these collections support the mission of a library: supporting teaching, serving a unique population (such as small liberal arts colleges), and providing for a community need • Spotlights some of the most frequently cited nontraditional collections, including the Tool Lending Library at Berkeley Public, the Library of Things at Sacramento Public, and the unique holdings of Alaska Resources Library and Information Services (ARLIS) • Presents contributions from both public and academic librarians, representing libraries ranging from the small to the very large

Satyendra Nath Bose has become a legendary figure of science in the 20th century in India with his revolutionary discovery on the nature of radiation. Despite the association with Einstein, however, little is known about him outside of India. This book highlights the remarkable intellect and the extraordinary personality of Bose set against the backdrop of a rich Bengali cultural tradition and British-Indian politics. Unlike other books covering the significance of Bose's discovery, this book describes his diverse scientific contributions to India's scientific community by bringing together selected articles and addresses by Bose as well as contributions from some well-known scientists on the many-faceted life of Bose, thus making it a truly unique volume.

In A Companion to Lollardy, Patrick Hornbeck sums up what we know about lollardy, describes, its fortunes in the hands of its most recent chroniclers, explores the many individuals, practices, texts, and beliefs that have been called lollard.

Selected works of the author, Indian scientist, available in the Science Library, University of Dhaka, Bangladesh.

Most data sets collected by researchers are multivariate, and in most cases, the variables need to be examined simultaneously to get the most informative results. This book covers the core multivariate methodology along with some basic theory for each method described. It also provides the necessary R and S-PLUS code for each analysis.

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

After decades of turmoil a new phase is opening up for Afghanistan, in which a new generation comes to the fore as many of the key players from earlier phases, including foreign interventionist powers, leave the scene. Although this new phase offers new possibilities and increased hope for Afghanistan's future, the huge problems created in earlier phases remain. This book presents a comprehensive overall assessment of the current state of politics and society in Afghanistan, outlining the difficulties and discussing the future possibilities. Many of the contributors are Afghans or Afghan insiders, who are able to put forward a much richer view of the situation than outside foreign observers.
