Milo leads a lonely childhood marked by the absence of his mother, about whom he knows next to nothing. His father has gone to work in the city, leaving him in the care of his three elderly aunts, who give him his

freedom to distract himself by the lake where he lives. In this lake, Milo discovers a fish egg of unusual size, and when it hatches, a magnificent golden fish is born. Milo is only half surprised when strange creatures, including a toad man, become interested in his secret discovery. He soon meets and frees a fiery young girl named Valia, who was held prisoner by the toad man, and the two are forced to flee, guided by the golden fish, to "the other side" of the lake . . . the flip side underneath, one of many parallel worlds that are connected through the lakes, rivers, and oceans. In this parallel universe, an evil wizard wields power, driven by blind vengeance, with the toad man does his bidding. Milo finds himself the subject of fascination, fear, and excitement by the elf-like population, who aren't sure what to do with him, until he sets out on an adventure to protect them from the evil wizard. Along the way, he finally encounters his mother, who turns out to be a sorceress from this world, and the polar opposite power of the evil wizard. He's the lost scion of a new generation and wizards, and he never knew it (even though his three aunts and the golden fish did). Milo is the key in this battle; if the wizard manages to capture him, there will be no more opponents in the world on this side of the lake, meaning he could extend his domination and carry it even further, leading the conquest of the multiple parallel universes . . . A beautifully illustrated, family-friendly, magical adventure in the vein of Amulet and The Wizard of Oz. The first of three self-contained story volumes.

seen all the movies about Hollywood. I knew how things worked." Twenty-four year-old Russel Middlebrook and his boyfriend have moved to Los Angeles so Russel can try to make it as a screenwriter. Almost right away, in a forgotten old house off of Sunset Boulevard, Russel meets Isaac Brander, a once-famous film producer who is convinced he can turn Russel's screenplay into a movie. Russel knows that success can't possibly come this easy. After all, most of Russel's Los Angeles friends are so desperate to make it that it's downright scary. His ex-boyfriend, Otto, is trying everything to become an actor, and Daniel, the sexy neighbor, doesn't even need a casting couch to get naked. So what's the catch with Mr. Brander? Could it be that movies about Hollywood don't tell the whole truth? But what does that mean for Russel's soul? Barefoot in the City of Broken Dreams, a companion book to Brent Hartinger's *The Thing I Didn't Know I Didn't Know*, is a fast-paced, funny story about the price of fame in Hollywood: the hilarious lengths people will go to achieve it, and the touching secret to survival when things don't work out exactly as planned.

Advance Praise for *Barefoot in the City of Broken Dreams*: "A sharp, canny, highly engaging tour through a Hollywood of cunning characters and colorful intrigues, guided by the clever voice of Russel Middlebrook as an eager young screenwriter trying to bust in. I was charmed by every sly, sexy page." - Barry Sandler, screenwriter of *Making Love and Crimes of Passion* "With his trademark wit, warmth, and economy, Brent Hartinger brilliantly captures what it's like to move to L.A. and try and make it in Hollywood: the highs and the lows, the friends and

Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control – from the author of The Laws of Human Nature. In the book that People magazine proclaimed “beguiling” and “fascinating,” Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence (“Law 1: Never Outshine the Master”), others teach the value of confidence (“Law 28: Enter Action with Boldness”), and many recommend absolute self-preservation (“Law 15: Crush Your Enemy Totally”). Every law, though, has one thing in common: an interest in total domination. In a bold and arresting two-color package, The 48

Drawing from a rich corpus of art works, including sarcophagi, tomb paintings, and floor mosaics, Patrick R. Crowley investigates how something as insubstantial as a ghost could be made visible through the material grit of stone and paint. In this

fresh and wide-ranging study, he uses the figure of the ghost to offer a new understanding of the status of the image in Roman art and visual culture. Tracing the shifting practices and debates in antiquity about the nature of vision and representation, Crowley shows how images of ghosts make visible structures of beholding and strategies of depiction. Yet the figure of the ghost simultaneously contributes to a broader conceptual history that accounts for how modalities of belief emerged and developed in antiquity. Neither illustrations of ancient beliefs in ghosts nor depictions of afterlife, these images show us something about the visual event of seeing itself. The Phantom Image offers essential insight into ancient art, visual culture, and the history of the image.

Our natural world has been irretrievably altered by humans, for humans. From domesticated wheat fields to nuclear power plants and spacecraft, everything we see and interact with has in some way been changed by the presence of our species, starting from the Neolithic era so many centuries ago. This book provides a crash course on the issues and debates surrounding technology's shifting place in our society. It covers the history of our increasingly black-box world, which some theorize will end with technology accelerating beyond our understanding. At the same time, it analyzes competing trends and theories, the lack of scientific knowledge of large sections of the population, the dogmas of pseudoscience, and the growing suspicion of science and technology, which may inevitably lead to scientific stagnation. What will the future of our civilization look like? How soon might

scientific acceleration or stagnation arrive at our doorstep, and just how radically will such technological shifts change our culture? These are issues that we must address now, to insure our future goes the way we choose.
