This text remains the only textbook for the historical geology module written from a truly integrated Earth systems perspective, combining the physical and biological history of Earth. This thoroughly updated new edition includes new coverage on mass extinctions and climate change, plus improved organization based on the geologic timescale.

Designed for a new generation of readers, Stanley's Earth System History is a reforging of his Exploring Earth and Life Through Time. Adopting an earth system approach throughout, Earth System History shows students how Earth's ecosystem has developed over time and how events in the past provide a perspective for dealing with present and future changes. Clear and concise, the new Second Edition of this introduction to historical geology is perfect for one-term non-majors courses and contains lots of new content and improved visuals.

For advanced undergraduate structural geology courses.

The case history approach has an impressive record of success in a variety of disciplines. Collections of case histories, casebooks, are now widely used in all sorts of specialties other than in their familiar application to law and medicine. The case method had its formal beginning at Harvard in 1871 when Christopher Lagdell developed it as a means of teaching. It was so successful in teaching law that it was soon adopted in medical education, and the collection of cases provided the raw material for research on various diseases. Subsequently, the case history approach spread to such varied fields as business, psychology, management, and economics, and there are over 100 books in print that use this approach. The idea for a series of Casebooks in Earth Science grew from my experience in organizing and editing a collection of examples of one variety of sedimentary deposits. The project began as an effort to bring some order to a large number of descriptions of these deposits that were so varied in presentation and terminology that even specialists found them difficult to compare and analyze. Thus, from the beginning, it was evident that something more than a simple collection of papers was needed. Accordingly, the nearly fifty contributors worked together with George de Vries Klein and me to establish a standard format for presenting the case histories.

Describes recent theories about the tempo of evolutionary change and discusses their implications concerning the evolution of human beings
