In the periodic table,  
elements in a column form  
analogous compounds because  
they have the same charge on

# Read Free Chemistry Naming Ions Study Guide

**Answer Key** The halogens all tend to gain one electron, giving their ions a characteristic charge of  $-1$ . The alkali metals, on the other side of the periodic table, all readily lose one electron, so their ions

# Read Free Chemistry Naming Ions Study Guide

possess a charge of +1.

Charges are balanced in a compound with the number of alkali metal ions equal to the number of halogen ions; NaCl is such a compound.

## NOMENCLATURE STUDY GUIDE

### CHAPTER 4

The IUPAC (International Union of Pure and Applied Chemistry) convention is used to assign names to chemical compounds.

# Read Free Chemistry Naming Ions Study Guide

Answer Key  
Scientists from around the world formed IUPAC because they recognized the need for standardization in chemistry. IUPAC sets the guidelines for how compounds are named. There are two main divisions of compounds.
