Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

This book reflects the accrediting industry's increased emphasis on safety for the patient, employees, and the general public. To that end, it aims to help pharmacies comply with critical standards and incorporate them into their everyday practice. This edition includes the most current updates, revised examples of forms and documents, updated checklists, and an expanded more complete index for easier search capabilities. Additionally, the authors put this latest data into context with compliance strategies you can use in your everyday practice.
