This research studied whether computer-generated cloze items using natural language processing methods could promote learning and comprehension of science texts compared to human and random cloze items. Participants recruited from Amazon Mechanical Turk (N = 562) took a pretest on one of three science topics and then read a text on it. Participants then practiced cloze items about the text generated either by a computer (machine), human, or randomly.

Cloze items were presented using the MoFaCTS adaptive practice system. After 24 hours participants took a post-test on the text. ANOVA showed a significant effect of cloze type on gain score, and pairwise comparisons found the human conditions had higher gain scores than machine or random conditions. A separate ANOVA on the circulatory system text showed machine had higher gain scores than random. Implications of these findings are discussed.
