First multi-year cumulation covers six years: 1965-70.

The Etruscans and the History of Dentistry offers a study of the construction and use of gold dental appliances in ancient Etruscan culture, and their place within the framework of a general history of dentistry, with special emphasis on appliances, from Bronze Age Mesopotamia and Egypt to modern Europe and the Americas. Included are many of the ancient literary sources that refer to dentistry - or the lack thereof - in Greece and Rome, as well as the archaeological evidence of ancient dental health. The book challenges many past works in exposing modern scholars' fallacies about ancient dentistry, while presenting the incontrovertible evidence of the Etruscans' seemingly modern attitudes to cosmetic dentistry.

This book delineates the contours of molecular and structural archaeology as an emergent interdisciplinary field based on structural analysis at the molecular level and examines novel methodologies to reconstruct the synthesis and long-term transformation of materials used in antiquity. The focus of this volume is on cosmetic and therapeutic materials.
