Geometry And Its Applications

Differential geometry is not just for mathematics majors, but also for students in engineering and the sciences. Into the mix of these ideas comes the opportunity to visualize concepts through the use of computer algebra systems such as Maple.

Differential Geometry and its Applications publishes original research papers and survey papers in differential geometry and in all interdisciplinary areas in mathematics which use differential geometric methods and investigate geometrical structures. The following main areas are covered: differential equations on manifolds, global analysis, Lie groups, local and global differential geometry, the calculus of variations on manifolds, topology of manifolds, and mathematical physics.

Differential Geometry and its Applications

The main applications of elliptic functions presented here are the derivation of explicit parametrizations for unduloids and for the Mylar balloon. Such explicit parametrizations allow for the determination of differential geometric invariants such as Gauss curvature as well as an analysis of geodesics.
