Bacterial canker. Bacterial canker is another disease that can be found in virtually every fruit tree. The particular disease symptoms in fruit trees include holes in the leaves, as well as new shoots, and even whole branches dying off. It is mostly found in stone fruit trees and trees that have suffered frost damage.

harvest disease of a fruit or vegetable. This was the biological control of botrytis rot of strawberry (*Fragaria × ananassa*) with *Tri-choderma* sp. (Tronsmo and Dennis, 1977). Since that time, there has been a wealth of research conducted in this area, mostly on fruit diseases, and several antagonists have been identified. The topic has also been the
