The angle "d" is the angle at which the conduit is bent. One of the remaining angles of the triangle is always 90 degrees, while the third angle always depends on the first, being 90 degrees minus angle d. The sides of the triangle are labeled A, B and C; these letters represent the length of each side.

Height stub up: the distance from the end of conduit to the bottom of the 90° bend.

1. Determine the height of the offset/stub up, for this example it is 11" (Figure 1). 2. For this example a 1/2" pipe will be used, so subtract 5" from the height of the offset.

(EMT Bender)Conduit Bending Instructions - Electrical ...

When an electrician can utilize his skill in bending conduit with accuracy, performance speaks volumes about his training. I use this book in my classes because it gives clear instructions in conduit bending but also pre-determined measurements can be used. All the measurements are calculated and cut, examples are easy to follow.

Symbols built into these benders by manufacturers serve as indispensable guide marks for accuracy. However, for bending rigid steel conduit or IMC conduit, different hand benders are recommended. Electricians are sometimes tempted to use a 3/4" EMT bender for bending 1/2" rigid or 1/2" IMC conduit.
