India faces a defining period. Its status as a global power is not only recognized but increasingly institutionalized, even as geopolitical shifts create both opportunities and challenges. With critical interests in almost every multilateral regime and vital stakes in emerging ones, India has no choice but to influence the evolving multilateral order. If India seeks to affect the multilateral order, how will it do so? In the past, it had little choice but to be content with rule taking—adhering to existing international norms and institutions. Will it now focus on rule breaking—challenging the present order primarily for effect and seeking greater accommodation in existing institutions? Or will it focus on rule shaping—contributing in partnership with others to shape emerging norms and regimes, particularly on energy, food, climate, oceans, and cyber security? And how do India's troubled neighborhood, complex domestic politics, and limited capacity inhibit its rule-shaping ability? Despite limitations, India increasingly has the ideas, people, and tools to shape the global order—in the words of Jawaharlal Nehru, "not wholly or in full measure, but very substantially." Will India emerge as one of the shapers of the emerging international order? This volume seeks to answer that question.

Paul Kennedy's classic naval history, now updated with a new introduction by the author This acclaimed book traces Britain's rise and fall as a sea power from the Tudors to the present day. Challenging the traditional view that the British are natural 'sons of the waves', he suggests instead that the country's fortunes as a significant maritime force have always been bound up with its economic growth. In doing so, he contributes significantly to the centuries-long debate between 'continental' and 'maritime' schools of strategy over Britain's policy in times of war. Setting British naval history within a framework of national, international, economic, political and strategic considerations, he offers a fresh approach to one of the central questions in British history. A new introduction extends his analysis into the twenty-first century and reflects on current American and Chinese ambitions for naval mastery. 'Excellent and stimulating' Correlli Barnett 'The first scholar to have set the sweep of British Naval history against the background of economic history' Michael Howard, Sunday Times 'By far the best study that has ever been done on the subject ... a sparkling and apt quotation on practically every page' Daniel A. Baugh, International History Review 'The best single-volume study of Britain and her naval past now available to us' Jon Sumida, Journal of Modern History

During the 1990s, a new paradigm for power sector reform was put forward emphasizing the restructuring of utilities, the creation of regulators, the participation of the private sector, and the establishment of competitive power markets. Twenty-five years later, only a handful of developing countries have fully implemented these Washington Consensus policies. Across the developing world, reforms were adopted rather selectively, resulting in a hybrid model, in which elements of market orientation coexist with continued state dominance of the sector. This book aims to revisit and refresh thinking on power sector reform approaches for developing countries. The approach relies heavily on evidence from the past, drawing both on broad global trends and deep case material from 15 developing countries. It is also forward looking, considering the implications of new social and environmental policy goals, as well as the emerging technological disruptions. A nuanced picture emerges. Although regulation has been widely adopted, practice often falls well short of theory, and cost recovery remains an elusive goal. The private sector has financed a substantial expansion of generation capacity; yet, its contribution to power distribution has been much more limited, with efficiency levels that can sometimes be matched by well-governed public utilities. Restructuring and liberalization have been beneficial in a handful of larger middle-income nations but have proved too complex for most countries to implement. Based on these findings, the report points to three major policy implications. First, reform efforts need to be shaped by the political and economic context of the country. The 1990s reform model was most successful in countries that had reached certain minimum conditions of power sector development and offered a supportive political environment. Second,

countries found alternative institutional pathways to achieving good power sector outcomes, making a case for greater pluralism. Among the top performers, some pursued the full set of market-oriented reforms, while others retained a more important role for the state. Third, reform efforts should be driven and tailored to desired policy outcomes and less preoccupied with following a predetermined process, particularly since the twenty-first-century agenda has added decarbonization and universal access to power sector outcomes. The Washington Consensus reforms, while supportive of the twenty-first-century agenda, will not be able to deliver on them alone and will require complementary policy measures

This book provides a comprehensive investigation of the messy and crisis-ridden relationship between the operations of capitalist finance, global capital flows, and state power in emerging markets. The politics, drivers of emergence, and diversity of these myriad forms of state power are explored in light of the positionality of emerging markets within the network of space and power relations that characterises contemporary global finance. The book develops a multi-disciplinary perspective and combines insights from Marxist political economy, post-Keynesian economics, economic geography, and postcolonial and feminist International Political Economy. Alami comprehensively reviews the theories, histories, and geographies of cross-border finance management, and develops a conceptual framework which allows unpacking the complex entanglement of constraint and opportunities, of growing integration and tight discipline, that cross-border finance represents for emerging markets. Extensive fieldwork research provides an in-depth comparative critical interrogation of the policies and regulations deployed in Brazil and South Africa. This volume will be especially useful to those researching and working in the areas of international political economy, contemporary geographies of money and finance, and critical development studies. It should also prove of interest to policy makers, practitioners, and activists concerned with the relation between finance and development in emerging markets and beyond.

The Western liberal democratic world order, which seemingly triumphed following the collapse of communism, is looking increasingly fragile as populists and nationalists take power in the United States, Europe and elsewhere, as the momentum of democratization in developing countries stalls, and as Western liberal establishments fail to deal with economic stagnation, worsening political polarization, social inequality, and migrant crises. At the same time there is a shift of economic power from the West towards Asia. This book explores these critical developments and their consequences for the world order. It considers how far the loss of the West ' s power to dominate the world order, together with the relative decline of US power and its abdication of its global leadership role, will lead to more conflict, disorder and chaos; and how far non-Western actors, including China, India and the Muslim world, are capable of establishing visionary policy initiatives which reconfigure the paths and rules of economic integration and globalization, and the mechanisms of global governance. The book also assesses the sustainability of the economic rise of China and other non-Western actors, explores the Western liberal democratic order ' s capacity for resilience, and discusses how far the outlook is pessimistic or optimistic.
