EMV Specification - ACS

A: EMV ® Three-Domain Secure (3DS) is a messaging protocol developed by EMVCo to enable consumers to authenticate themselves with their card issuer when making card-not-present (CNP) e-commerce purchases. The additional security layer helps prevent unauthorised CNP transactions and protects the merchant from CNP exposure to fraud.

solution has now received approval from EMVCo in line with the EMV 3DS v2.1.0 specification, the first step on the path to providing a certified 3DS solution. Fime's EMV 3DS testing solutions and services are designed to help solution providers, banks, merchants, and payment schemes to fast-track their projects.

Fime completes first EMV® 3DS ACS certification. | Fime
Ultimately, in the terminology of EMV 3DS, a 3DS Requestor begins a transaction by sending an Authentication Request (AReq) to the issuing bank's Access Control Server (ACS) via the payment network Directory Server. The EMV 3DS AReq is formatted as a JSON message, the fields of which (see EMV 3DS specification section B.1 for a list) include a

What to Know About the New PCI 3DS Core Security Standard

What is 3D Secure 2.0? Credit Card Authentication, But Better! 3D Secure 2 (3DS2) is the new authentication protocol for online card payments. 3DS2 is designed to improve upon 3D Secure 1 (3DS1) by addressing the old protocol's pain points, and delivering a much smoother and integrated user experience.
