The heater core in the Ford F150 is essentially a tiny radiator, located behind the glove box. However, while the purpose of the radiator is to remove heat from engine coolant, the heater core supplies the heat for the F150's environmental control system. Just as with the radiator, the heater core is susceptible to blockage and should be flushed with the cooling system at recommended service ...

The cooling system on the GTDI engine uses various tricks to control coolant flow through the engine. To allow engine components to warm up quicker, the 1.6L GTDI engine utilizes a coolant shutoff solenoid valve that controls coolant flow through the engine block during a cold start. The valve shuts down all coolant to the engine until the warm-up phase is over, then reopens, allowing normal ...
