The Kent engine is named, per Ford tradition, for the engine plant where it was produced: The Ford engine plant in the city of Kent in England. Engines in the Kent family have a chain-driven camshaft that rides in the block, and a rocker-arm valvetrain located on top of the cylinder head (OHV stands for Over-Head Valve).

that the combustion chamber was shifted from the head to the bowl of the piston and were know as BIP engines (Bowl In Piston).

Tuning guides for Kent / X-Flow - Classic Ford
Cosworth increased its association with Ford in 1969, by developing a double overhead camshaft (DOHC) 16-valve inline four-cylinder engine for road use in the Ford Escort. Working from the Kent block, Cosworth created a 1,601 cc for homologation purposes. The camshafts were driven by a toothed belt, hence the name BDA, literally meaning

In 1969 Cosworth developed the "BDA" for Ford , also a four valve head based on the crossflow engine that went on to win countless races and rallies. Ford last used the Kent based engine for motorsport in 1986 in the Group B RS200 that relied on a turbocharged version of the BDA called the BDT producing over 800bhp.
