Can it be there was only one summer that I was ten? First published in 1956, May Swenson's "The Centaur" remains one of her most popular and most anthologized poems. This is its first appearance as a picture book for children. In images bright and brisk and tangible, the poet re-creates the joy of riding a stick horse through a small-town summer. We find ourselves, with her, straddling "a long limber horse with . . . a few leaves for a tail," and pounding through the lovely dust along the path by the old canal. As her shape shifts from child to horse and back, we know exactly what she feels. Sherry Meidell's water-color illustrations perfectly convey the wit and beauty of May Swenson's poem. These are playful, satisfying images full of vitality and imagination. Meidell handles the joy of poem's fantasy and the joy of its occasional naughtiness with equal success.

A practical perspective on equipment and processes with instruction for many projects shown.

This book is the third in the Woodhead Publishing Reviews: Mechanical Engineering Series, and includes high quality articles (full research articles, review articles and case studies) with a special emphasis on research and development in machining and machine-tools. Machining and machine tools is an important subject with application in several industries. Parts manufactured by other processes often require further operations before the product is ready for application. Traditional machining is the broad term used to describe removal of material from a work piece, and covers chip formation operations including: turning, milling, drilling and grinding. Recently the industrial utilization of non-traditional machining processes such as EDM (electrical discharge machining), LBM (laser-beam machining), AWJM (abrasive water jet machining) and USM (ultrasonic machining) has increased. The performance characteristics of machine tools and the significant development of existing and new processes, and machines, are considered. Nowadays, in Europe, USA, Japan and countries with emerging economies machine tools is a sector with great technological evolution. Includes high quality articles (full research articles, review articles and cases studies) with a special emphasis on research and development in machining and machine-tools Considers the performance characteristics of machine tools and the significant development of existing and new processes and machines Contains subject matter which is significant for many important centres of research and universities worldwide
