Nested Ecology provides a pragmatic and functional approach to realizing a sustainable environmental ethic. Edward T. Wimberley asserts that a practical ecological ethic must focus on human decision making within the context of larger social and environmental systems. Think of a set of mixing bowls, in which smaller bowls sit within larger ones. Wimberley sees the world in much the same way, with personal ecologies embedded in social ecologies that in turn are nested within natural ecologies. Wimberley urges a complete reconceptualization of the human place in the ecological hierarchy. Going beyond the physical realms in which people live and interact, he extends the concept of ecology to spirituality and the "ecology of the unknown." In doing so, Wimberley defines a new environmental philosophy and a new ecological ethic.

Climate Change, Public Health, and the Law provides the first comprehensive explication of the dynamic interactions between climate change, public health law, and environmental law, both in the United States and internationally. Responding to climate change and achieving public health protections each require the coordination of the decisions and behavior of large numbers of people. However, they also involve interventions that risk compromising individual rights. The challenges involved in coordinating large-scale responses to public health threats and protecting against the invasion of rights, makes the law indispensable to both of these agendas. Written for the benefit of public health and environmental law professionals and policymakers in the United States and in the international public health sector, this volume focuses on the legal components of pursuing public health goals in the midst of a changing climate. It will help facilitate efforts to develop, improve, and carry out policy responses at the international, federal, state, and local levels.
