"Is titanium for you? Can better brakes reduce lap times significantly? How do you choose the rights nuts and bolts? Which is more important, cornering or straight-line speed? Why did it break again? Engineer to Win not only answers these and many other questions, it gives you the reasons why."--Back cover.

Boundary Value Problems is a text material on partial differential equations that teaches solutions of boundary value problems. The book also aims to build up intuition about how the solution of a problem should behave. The text consists of seven chapters. Chapter 1 covers the important topics of Fourier Series and Integrals. The second chapter deals with the heat equation, introducing separation of variables. Material on boundary conditions and Sturm-Liouville systems is included here. Chapter 3 presents the wave equation; estimation of eigenvalues by the Rayleigh quotient is mentioned briefly. The potential equation is the topic of Chapter 4, which closes with a section on classification of partial differential equations. Chapter 5 briefly covers multidimensional problems and special functions. The last two chapters, Laplace Transforms and Numerical Methods, are discussed in detail. The book is intended for third and fourth year physics and engineering students.

That evening the down train from London deposited at the little country station of Ramsdon but a single passenger, a man of middle height, shabbily dressed, with broad shoulders and long arms and a most unusual breadth and depth of chest. Of his face one could see little, for it was covered by a thick growth of dark curly hair, beard, moustache and whiskers, all overgrown and ill-tended, and as he came with a somewhat slow and ungainly walk along the platform, the lad stationed at the gate to collect tickets grinned amusedly and called to one of the porters near.
