The growing importance of immigration in the United States today prompted this examination of the adequacy of U.S. immigration data. This volume summarizes data needs in four areas: immigration trends, assimilation and impacts, labor force issues, and family and social networks. It includes recommendations on additional sources for the data needed for program and research purposes, and new questions and refinements of questions within existing data sources to improve the understanding of immigration and immigrant trends.

"How the Other Half Lives" by Jacob Riis sheds fascinating light on how our immigrants in the 1800's lived in New York City. A must-read for Americans whose family has been in the U.S. for only a few generations, this book tells what it was really like in the slums. Whether Irish, Italian, Jewish, Chinese or Polish, German, Russian, hordes of refugees ended up in New York on the promise of a better life. Entrepreneurs lured poor people from Eastern Europe and contracted out their labor in sweat shops in the US. The laborers lived in tenements, which were dark, unventilated cages in blocks of buildings that rented for a surprising high rent to people who died by the thousands in the unsanitary conditions. The conditions described by Jacob Riis in this classic are heart-rending, especially the part about foundling babies (abandoned newborns). A cradle was put outside a Catholic Church and instead of a baby each night, racks of babies appeared. The Church had to establish foundling hospitals run by nuns, who persuaded the unwed or impoverished mothers to nurse the baby they gave up, plus another baby. The child mortality rate, especially in the "back tenements" or buildings built on to the back of others (dark and airless) was incredible. Riis also provides interesting information about the gangs of New York in "How the Other Half Lived."

Narrated by a longtime New York City ward boss, this volume reveals the successful application of corrupt practices such as patronage-based appointments and the exercise of power for personal gain.

This book sheds light on one of the most controversial issues of the decade. It identifies the economic gains and losses from immigration--for the nation, states, and local areas--and provides a foundation for public discussion and policymaking. Three key questions are explored: What is the influence of immigration on the overall economy, especially national and regional labor markets? What are the overall effects of immigration on federal, state, and local government budgets? What effects will immigration have on the future size and makeup of the nation's population over the next 50 years? The New Americans examines what immigrants gain by coming to the United States and what they contribute to the country, the skills of immigrants and those of native-born Americans, the experiences of immigrant women and other groups, and much more. It offers examples of how to measure the impact of immigration on government revenues and expenditures--estimating one year's fiscal impact in California, New Jersey, and the United States and projecting the long-run fiscal effects on government revenues and expenditures. Also included is background information on immigration policies and practices and data on where immigrants come from, what they do in America, and how they will change the nation's social fabric in the decades to come.

"Oscar Handlin was the scholar most responsible for establishing the legitimacy of immigration history."--Gary Gerstle, author of *American Crucible*

The gecekondus are the shantytowns of Turkey. This study by Kemal Karpat investigates within a broad historical, conceptual and comparative framework the migration and urbanization of the people of these settlements. It is based on personal interviews with people living in three gecekondus in the northern hills of Istanbul, along the Bosphorus. The gecekondus are considered here as a part of the entire process of rural migration and urbanization - and so of the transformation of the economic, political, social and cultural order in the Third World nations. Special emphasis has been placed on the historical factors that undermined the traditional social structure in the third world and freed a large number of people for migration and resettlement, and also on the impact of the gecekondus upon the home villages. The author draws on several academic points of view - economics, political science, sociology, anthropology, history - and, himself a native Turk, brings a long acquaintance with that land and its people to this study of an institution whose importance has been largely unrecognized.

The report presents findings from the 2018 revision of *World Urbanization Prospects*, which contains the latest estimates of the urban and rural populations or areas from 1950 to 2018 and projections to 2050, as well as estimates of population size from 1950 to 2018 and projections to 2030 for all urban agglomerations with 300,000 inhabitants or more in 2018. The world urban population is at an all-time high, and the share of urban dwellers, is projected to represent two thirds of the global population in 2050. Continued urbanization will bring new opportunities and challenges for sustainable development.
