create and deploy global intranets, and perform basic troubleshooting in environments using Cisco multilayer switches for client hosts and services. They begin by reviewing basic switching concepts, network design, and campus network architecture. Next, they present in-depth coverage of spanning-tree, inter-VLAN routing, first-hop redundancy, network management, advanced switch features, high availability, and campus network security. Each chapter opens with a list of topics that clearly identify its focus. Each chapter ends with a summary of key concepts for quick study, as well as review questions to assess and reinforce your understanding. Throughout, configuration examples, and sample verification outputs illustrate critical issues in network operation and troubleshooting. This guide is ideal for all certification candidates who want to master all the topics covered on the SWITCH 300-115 exam. Serves as the official textbook for version 7 of the Cisco Networking Academy CCNP SWITCH course

Covers basic switching terminology and concepts, and the unique features of Cisco Catalyst switch designs
Reviews campus network design, including network structure, roles of Cisco Catalyst switches, and differences between Layer 2 and multilayer switches
Introduces VLANs, VTP, Trunking, and port-channeling
Explains Spanning Tree Protocol configuration
Presents concepts and modern best practices for interVLAN routing
Covers first-hop redundancy protocols used by Cisco Catalyst switches
Outlines a holistic approach to network management and Cisco Catalyst device security with AAA, NTP, 802.1x, and SNMP
Describes how to use advanced features to improve campus network resiliency and availability
Shows how to establish switch physical redundancy using Stackwise, VSS, or redundant supervisors
Explains advanced security features
