FUNDAMENTALS OF INTERNAL COMBUSTION ENGINES - Mechanical ...

This is an introductory article, the purpose of which is to provide fundamental information on internal combustion engines (ICEs). In Section 1, the different types of ICEs are presented, and their role in the framework of the energy conversion systems is discussed. The morphology and the basic principles of operation are also described and discussed, along with the different possible classification criteria.

Internal combustion engine is a heat engine which transforms chemical energy into mechanical energy. It is used in powered aircrafts, jet engines, turbo engines, helicopters, etc. This text attempts to understand the multiple branches that fall under the discipline of internal combustion engines and how such concepts have practical applications.
