Community practice is a stimulating and diverse field of nursing. Community nurses often work without direct support from other health professionals and need, not only excellent clinical skills, but also skills in communication, research and health promotion. Community Nursing Practice offers a thorough introduction to the role of the community nurse. Based on principles of primary health care, it outlines the theory, knowledge and skills required to make a difference to the health and wellbeing of individuals, families, groups, and even whole communities. The contributors make a point of articulating knowledge that is often taken for granted among experienced practitioners. Community Nursing Practice is based on the premise that community nursing is a specialist field of nursing practice in its own right, and nurses require a specific body of knowledge to work effectively in a community setting - no matter what their clinical focus or location. Contributors outline the foundations of community practice, including principles of disease prevention and wellness promotion, as well as a social model of health. Together with the skills required for work with different population groups, the contribution of research is explored. Professional skills including program management, advocacy, teamwork, home visiting and self management are also covered. With contributions from leading nurse educators and researchers, Community Nursing Practice is richly illustrated with case studies and examples from a variety of practice settings. It is an essential student text and valuable professional reference.

A Textbook of Community Nursing is a comprehensive and evidence-based introduction covering the full range of professional topics, including professional approaches to care, public health, eHealth, therapeutic relationships and the role of community nursing in mental health. The new edition has been updated throughout, including new guidelines and policies. It also provides a stronger focus on evidence-based practice. This user-friendly and accessible textbook includes: Current theory, policy, and guidelines for practice. All chapters are underpinned by a strong evidence base; Learning objectives for each chapter, plus exercises and activities to test current understanding, promote reflective practice, and encourage further reading; Case studies and examples from practice which draw on all branches of community nursing to illustrate practical application of theory. This is an essential text for all pre-registration nursing students, students on specialist community nursing courses, and qualified nurses entering community practice for the first time.
