number (1, 3, 5 and so on) refers to the revision of the specification and, in practical terms, to the number of twists inside the wire -- i.e., to the quality of connection in a jack. CAT1 is typically used for telephone wire. This type of wire is not capable of supporting computer network traffic and is not twisted.

Types of network cables: An introduction to network cabling
When 10 Mbps Ethernet was most popular, during the 1980s and early 1990s, networks typically used one of two kinds of coax cable – thinnet (10BASE2 standard) or thicknet (10BASE5). These cables consist of an inner copper wire of varying thickness surrounded by insulation and another shielding. Their stiffness caused network administrators
