Through a winning combination of easy-to-understand explanations, high-interest readings, and a carefully designed chapter sequence, Laraine Flemming's READING FOR THINKING takes the mystery out of critical reading for developmental students. Following a comprehensive review of essential learning and comprehension strategies such as evaluating websites, identifying main ideas, and using organizational patterns to aid remembering, Flemming shows how critical reading is a natural part of comprehending an author's message. Chapter by chapter, students expand their definition of comprehension to include evaluating a writer's purpose, recognizing tone, separating fact from opinion, and determining the degree of bias, while also learning how to summarize and synthesize different points of view on the same topic. In addition to marginal annotations modeling the skilled reader's response, a host of new readings, a new vocabulary feature, and brand new material about reading on the Web, the eighth edition of READING FOR THINKING expands the use of writing assignments to help students identify the strategies writers use to communicate their ideas to readers effectively. "Crammed with provocative insights, raw emotion, and heartbreaking dilemmas," (The New York Times) First, Do No Harm is a powerful examination of how life and death decisions are made at a major metropolitan hospital in Houston, as told through the stories of doctors, patients, families, and hospital administrators facing unthinkable choices. What is life worth? And when is a life worth living? Journalist Lisa Belkin examines how these questions are asked and answered over one dramatic summer at Hermann Hospital in Houston, Texas. In an account that is fascinating, revealing, and almost novelistic in its immediacy, Belkin takes us inside a major hospital and introduces us to the people who must make life and death decisions every day. As we walk through the hallways of the hospital we meet a young pediatrician who must decide whether to perform a risky last-ditch surgery on a teenager who has spent most of his fifteen years in a hospital; we watch as new parents battle with doctors over whether to disconnect their fragile, premature twins from the machine that keeps them breathing; we are in the operating room as a poor immigrant, paralyzed from a gunshot in the neck, is asked by doctors whether or not he wishes to stay alive; we witness the worry of a kidney specialist as he decides whether or not to transfer an uninsured baby to the county hospital down the road. We experience critical moments in the lives of these real people as Belkin explores challenging issues and questions involving medical ethics, human suffering, modern technology, legal liability, and financial reality. As medical technology advances, the choices grow more complicated. How far should we go to save a life? Who decides? And who pays?

De pie frente al público, Victor Villaseñor miró al grupo de maestros sentados frente a él, y su mente se llenó de recuerdos de infancia llenos de humillación y abuso por parte de sus profesores. Se sintió enfurecer. Con el corazón en la mano, comenzó a hablar de esos abusos. Y cuando terminó, para su gran sorpresa, encontró a todos los profesores de pie aplau-diéndolo enfáticamente. Muchas de las personas en el público no logran contener sus lágrimas. Así comienzan las conmovedoras y apasionadas memorias de Victor Villaseñor. A pesar de ser muy talentoso e imaginativo desde muy niño, tuvo que vivir con una dificultad de aprendizaje (no fue sino hasta los 44 años de edad que fue diagnosticado con un caso grave de dislexia), y la frustración de ser latino en una escuela americana en la que sólo se hablaba inglés. A pesar de los profesores que lo maltrataban porque no podía hablar inglés, Villaseñor se aferró a su sueño de un día convertirse en escritor. Hoy en día, es considerado uno de los autores más importantes de nuestra era.

Among ancient Mesoamerican and Southwestern peoples, water was as essential as maize for sustenance and was a driving force in the development of complex society. Control of water shaped the political, economic, and religious landscape of the ancient Americas, yet it is often overlooked in Precolumbian studies. Now one volume offers the latest thinking on water systems and their place within the ancient physical and mental language of the region. Precolumbian Water Management examines water management from both economic and symbolic perspectives. Water management facilities, settlement patterns, shrines, and water-related imagery associated with civic-ceremonial and residential architecture provide evidence that water systems pervade all aspects of ancient society. Through analysis of such data, the contributors seek to combine an understanding of imagery and the religious aspects of water with its functional components, thereby presenting a unified perspective of how water was conceived, used, and represented in ancient greater Mesoamerica. The collection boasts broad chronological and geographical coverageNfrom the irrigation networks of Teotihuacan to the use of ritual water technology at Casas GrandesNthat shows how procurement and storage systems were adapted to local conditions. The articles consider the mechanisms that were used to build upon the sacredness of water to enhance political authority through time and space and show that water was not merely an essential natural resource but an important spiritual one as well, and that its manipulation was socially far more complex than might appear at first glance. As these papers reveal, an understanding of materials associated with water can contribute much to the ways that archaeologists study ancient cultural systems. Precolumbian Water Management underscores the importance of water management research and the need to include it in archaeological projects of all types.
