The Institute of Food Technologists (IFT) sponsors each year a two-day short course that covers a topic of major importance to the food industry. "Hazard Analysis and Critical Control Points" was the title for the short course which was held May 31-June 1, 1991, immediately prior to the 51st Annual IFT Meeting. These short courses have been published as a proceedings in previous years; however, the current and future importance of the Hazard Analysis and Critical Control Point (HACCP) system prompted publication of the 1991 short course as a book. This book is designed to serve as a reference on the principles and application of HACCP for those in quality control/assurance, technical management, education and related areas who are responsible for food safety management. The National Advisory Committee on Microbiological Criteria for Foods (NACMCF) published in November 1989 a pamphlet titled "HACCP Principles for Food Production" (Appendix A). This document dealt with HACCP as applied to the microbiological safety of foods; however, the principles can be modified to apply to chemical, physical and other hazards in foods. The principles recommended by the NACMCF have been widely recognized and adopted by the food industry and regulatory agencies. Implementation of these principles provides a proactive, preventive system for managing food safety. HACCP should be applied at all stages of the food system, from production to consumption.

HACCP FOOD SAFETY EMPLOYEE MANUAL, 1/e is an easy-to-read text teaches the basics of food safety using the HACCP system, presenting the core knowledge, skills, and abilities that retail foodservice employees need to prevent accidental or deliberate food contamination. The easy-to-understand HACCP Star concept is used throughout to illustrate how HACCP's standard operating procedures and seven principles work together. The text begins by presenting basic food safety and food defense standard operating procedures, and explaining why they are so important. Next, it covers all elements of creating and using an effective HACCP plan, including: conducting hazard analyses, determining critical control points, establishing critical limits monitoring procedures, and corrective actions; verifying that the system works, and keeping records.

Food Safety Management: A Practical Guide for the Food Industry with an Honorable Mention for Single Volume Reference/Science in the 2015 PROSE Awards from the Association of American Publishers is the first book to present an integrated, practical approach to the management of food safety throughout the production chain. While many books address specific aspects of food safety, no other book guides you through the various risks associated with each sector of the production process or alerts you to the measures needed to mitigate those risks. Using practical examples of incidents and their root causes, this book highlights pitfalls in food safety management and provides key insight into the means of avoiding them. Each section addresses its subject in terms of relevance and application to food safety and, where applicable, spoilage. It covers all types of risks (e.g., microbial, chemical, physical) associated with each step of the food chain. The book is a reference for food safety managers in different sectors, from primary producers to processing, transport, retail and distribution, as well as the food services sector. Honorable Mention for Single Volume Reference/Science in the 2015 PROSE Awards from the Association of American Publishers Addresses risks and controls (specific technologies) at various stages of the food supply chain based on food type, including an example of a generic HACCP study Provides practical guidance on the implementation of elements of the food safety assurance system Explains the role of different stakeholders of the food supply

HACCP is a systematic approach to the identification, evaluation, and control of food safety hazards. It is being applied across the world, with countries such as the US, Australia, New Zealand, and the UK leading the way. However, effective implementation in the meat industry remains difficult and controversial. HACCP in the meat industry provides a survey of principles and practices, providing a guide to making HACCP systems work in the meat industry.

The Hazard Analysis and Critical Control Point (HACCP) system is a preventative food safety management system, that can be applied throughout the food supply chain from primary production to the consumer. HACCP is internationally recognised as the most effective way to produce safe food, providing a structure for objective assessment of what can go wrong and requiring controls to be put in place to prevent problems. As part of the Blackwell Food Industry Briefing Series, this important book provides a concise, easy-to-use, quick reference aimed at busy food-industry professionals, students or others who need to gain an outline working knowledge. The book is structured so that the reader can read through it in a few hours and arm themselves with the essentials of the topic. Clearly presented, this HACCP briefing includes checklists, bullet points, flow charts, schematic diagrams for quick reference, and at the start of each section the authors have provided useful key points summary boxes. Written by Sara Mortimore and Carol Wallace, recognised international experts on the HACCP system, this book is a vital tool for all those who need to gain an overview of this extremely important and most useful of food safety systems. A concise, easy to use, quick reference book. Contains information needed to gain a working knowledge of HACCP. Written by people who have proven experience in the field, in both large and small business and on an international basis.
