Currently, linguistic minority students - students who speak a language other than English at home - represent 21% of the entire K-12 student population and 11% of the college student population. Bringing together emerging scholarship on the growing number of college-bound linguistic minority students in the K-12 pipeline, this ground-breaking volume showcases new research on these students' preparation for, access to, and persistence in college. Other than studies of their linguistic challenges and writing and academic literacy skills in college, little is known about the broader issues of linguistic minority students' access to and success in college. Examining a variety of factors and circumstances that influence the process and outcome, the scope of this book goes beyond students' language proficiency and its impact on college education, to look at issues

such as student race/ethnicity, gender, SES, and parental education and expectations. It also addresses structural factors in schooling including tracking, segregation of English learners from English-fluent peers, availability and support of institutional personnel, and collegiate student identity and campus climate. Presenting state-of-the-art knowledge and mapping out a future research agenda in an extremely important and yet understudied area of inquiry, this book advances knowledge in ways that will have a real impact on policy regarding linguistic minority immigrant students' higher education opportunities.

In the USA, the number of college students with limited English proficiency is increasing. Even after successfully completing a course of English as a second language, many face both linguistic and cultural barriers in mainstream classes. This book focuses on both the theory and practice of assisting such students, especially in the sciences. As the number of non-native English speaking students increases at colleges and universities, innovative approaches are needed to successfully educate this population and how science is taught may be crucial. Instruction in the students' native language

may become increasingly important in attracting and retaining non-native English speakers in college. This book is aimed primarily at staff who teach science to LEP undergraduates, but others who should be interested include staff involved with postgraduate students and high school science teachers.

This book constitutes the refereed proceedings of the 29th National Conference on Computer Science Technology and Education, NCCSTE 2019, held in Kaifeng, China, in October 2019. The 12 full papers presented were thoroughly reviewed and selected from 50 submissions. The papers focus on the diverse environments of smart learning, including massive open online courses with AI assistants, intelligent tutoring systems, interactive learning courseware, learning games, collaborative programming communities, community tutorial systems, personalized exercise programs, tutoring robotics, etc. The papers are organized in the following topical sections: ?smart learning; information technologies.

This volume revisits the most important issues that Anglo-American studies are facing at the beginning of the twenty-first century, with regards to both research and teaching. Given the English language's status as a lingua franca, the culture that produced it, and that has

been changing it, the literature written in English, and relevant linguistic and literary discourse have come to largely dominate critical theory globally. Therefore, the subjects of Anglo-American studies, and their traditional and modern concepts, must be approached from a multidisciplinary perspective, and must also be problematized in, and determined by, other spheres of the world, especially at the universities at which they are studied. This book, consequently, approaches both mainstream cultural, literary, linguistic and academic achievements and, often by way of comparison, those smaller, more distant, and marginalized fields, traditionally subordinate studies, as well as instances of cultural hybridization. Given its concern with a broad field of culture, literature, linguistics, and methodology of teaching English as a foreign language, this book consists of two main parts comprising the closest research and teaching fields; one attending to culture and literature, and the other approaching linguistics and methodology.

Each number is the catalogue of a specific school or college of the University.

The report gives extensive data on use of blogs, listservs, podcasts and webcasts by American college students. Data is broken out by more than 16 criteria including gender, income level, type and size of college, mean SAT acceptance score of the college, and many other variables.

For well over a half century, American Universities and Colleges has been the most comprehensive and highly respected directory of four-year institutions of higher education in the United States. A two-volume set that Choice magazine hailed as a most important resource in its November 2006 issue, this revised edition features the most up-to-date statistical data available to guide students in making a smart yet practical decision in choosing the university or college of their dreams. In addition, the set serves as an indispensable reference source for parents, college advisors, educators, and public, academic, and high school librarians. These two volumes provide extensive information on 1,900 institutions of higher education, including all accredited colleges and universities that offer at least the baccalaureate degree. This essential resource offers pertinent, statistical data on such topics as tuition, room and board; admission requirements; financial aid; enrollments; student life; library holdings; accelerated and study abroad programs; departments and

teaching staff; buildings and grounds; and degrees conferred. Volume two of the set provides four indexes, including an institutional Index, a subject accreditation index, a levels of degrees offered index, and a tabular index of summary data by state. These helpful indexes allow readers to find information easily and to make comparisons among institutions effectively. Also contained within the text are charts and tables that provide easy access to comparative data on relevant topics.
