This new edition of GEMS most popular math guide features a new foreword by the author. These fifty cooperative logic activities are designed for groups of four. Each student receives a clue to a problem and needs to share the information with all other group members. The solution can ONLY be discovered by working together and connecting all the clues. In a non-competitive environment, students develop communication and problem-solving skills. To come up with a "group solution," students will need to learn to listen, to be patient, and to value the contributions of others. Through the process, students learn to appreciate a variety of approaches to a problem. Jan M. Goodman is currently Principal of Jefferson Elementary School in Berkeley, California. Reissued with new ISBN. Also available by Jan M. Goodman "Group Solutions, Too!" PB \$21.00, 0-912511-38-9" CUSA

One of the most popular GEMS guides, Group Solutions provides more than fifty highly involving cooperative logic activities designed for groups of four students. Each student receives a clue to a problem and needs to share the information with all other group members to find the solution, and it can Only be discovered by connecting the information from all the clues.

This is a second substantial volume of cooperative logic activities similar to those found in the extremely popular GEMS guide Group Solutions. The more than fifty activities in the new guide take advantage of the same cooperative format, but the context explored is distinct and logical thinking skills are focused in new ways. Numerous math and science skills and concepts are eagerly explored as cooperative skills are nurtured.

Plunkett's InfoTech Industry Almanac presents a complete analysis of the technology business, including the convergence of hardware, software, entertainment and telecommunications. This market research tool includes our analysis of the major trends affecting the industry, from the rebound of the global PC and server market, to consumer and enterprise software, to super computers, open systems such as Linux, web services and network equipment. In addition, we provide major statistical tables covering the industry, from computer sector revenues to broadband subscribers to semiconductor industry production. No other source provides this book's easy-to-understand comparisons of growth, expenditures, technologies, imports/exports, corporations, research and other vital subjects. The corporate profile section provides in-depth, one-page profiles on each of the top 500 InfoTech companies. We have used our massive databases to provide you with unique, objective analysis of the largest and most exciting companies in: Computer Hardware, Computer Software, Internet Services, E-Commerce, Networking, Semiconductors, Memory, Storage, Information Management and Data Processing. We've been working harder than ever to gather data on all the latest trends in information technology. Our research effort includes an exhaustive study of new technologies and discussions with experts at dozens of innovative tech companies. Purchasers of the printed book or PDF version may receive a free CD-ROM database of the corporate profiles, enabling export of vital corporate data for mail merge and other uses.

Recent years have seen the development of powerful tools for verifying hardware and software systems, as companies worldwide realise the need for improved means of validating their products. There is increasing demand for training in basic methods in formal reasoning so that students can gain proficiency in logic-based verification methods. The second edition of this successful textbook addresses both those requirements, by continuing to provide a clear introduction to formal reasoning which is both relevant to the needs of modern computer science and rigorous enough for practical application. Improvements to the first edition have been made throughout, with extra and expanded sections on SAT solvers, existential/universal second-order logic, micro-models, programming by contract and total correctness. The coverage of model-checking has been substantially updated. Further exercises have been added. Internet support for the book includes worked solutions for all exercises for teachers, and model solutions to some exercises for students.

This leading text for symbolic or formal logic courses presents all techniques and concepts with clear, comprehensive explanations, and includes a wealth of carefully constructed examples. Its flexible organization (with all chapters complete and self-contained) allows instructors the freedom to cover the topics they want in the order they choose.
