Mathematical Methods for Physicists: A concise introduction

Mathematical physics refers to the development of mathematical methods for application to problems in physics. The Journal of Mathematical Physics defines the field as "the application of mathematics to problems in physics and the development of mathematical methods suitable for such applications and for the formulation of physical theories".

Prerequisites. This course is offered to students taking either or both of Physics A and Physics B, but who are not taking "Mathematics" in NST IB.. This course requires the material covered in the NST IA Mathematics and Physics for Natural Scientists courses, and uses examples showing how the mathematical methods introduced can be utilised in a range of physical problems.

The correct form for the part of the expansion containing the doubly repeated root is therefore $(Bx+C)/(x-2)^2$. Using this form and either of methods (i) and (ii) for determining the constants gives the full partial fraction expansion as. $x-4(x+1)(x-2)^2 = -\frac{5}{9(x+1)} + \frac{5x-16}{9(x-2)^2}$. as the reader may verify.
