Cardiovascular disease
(CVD), once thought to be
confined primarily to
industrialized nations, has

emerged as a major health threat in developing countries. Cardiovascular disease now accounts for nearly 30 percent of deaths in low and middle income countries each year, and is accompanied by significant

economic repercussions. Yet most governments, global health institutions, and development agencies have largely overlooked CVD as they have invested in health in developing countries. Recognizing the gap between

Bookmark File PDF Mcq Cardiovascular System

the compelling evidence of the global CVD burden and the investment needed to prevent and control CVD, the National Heart, Lung, and Blood Institute (NHLBI) turned to the IOM for advice on how to catalyze change.

Bookmark File PDF Mcq Cardiovascular System

In this report, the IOM recommends that the NHLBI, development agencies, nongovernmental organizations, and governments work toward two essential goals: creating environments that promote

Bookmark File PDF Mcq Cardiovascular System

Heart healthy lifestyle choices and help reduce the risk of chronic diseases, and building public health infrastructure and health systems with the capacity to implement programs that will effectively detect and

Bookmark File PDF Mcq Cardiovascular System

Reduce risk and manage CVD.
To meet these goals, the IOM
recommends several steps,
including improving
cooperation and
collaboration; implementing
effective and feasible
strategies; and informing

efforts through research and health surveillance. Without better efforts to promote cardiovascular health, global health as a whole will be undermined.
