Mercury, primarily because of its existence and bioaccumulation as methylmercury in aquatic organisms, is a concern for the health of higher trophic level organisms, or to their consumers. This is the major factor driving current research in mercury globally and in environmental regulation, and is the driver for the current UNEP Global Partnership for Mercury Transport and Fate Research (UNEP ...

In response to the growing concern about the mercury contamination in the Basin, USGS scientists in partnership with the U.S. Environmental Protection Agency (USEPA) began an investigation in April 2001 to determine factors affecting the fate and transport of mercury species in Lahontan Reservoir, part of the Carson River Basin.
