Natural Hazards: Earth's Processes as Hazards, Disasters ...

Natural Hazards (and the resulting disasters) are the result of naturally occurring processes that have operated throughout Earth's history. Most hazardous process are also Geologic Processes. Geologic processes effect every human on the Earth all of the time, but are most noticeable when they cause loss of life or property.

Natural Disasters & Assessing Hazards and Risk

A natural hazard is a natural phenomenon that might have a negative effect on humans and other animals, or the environment. Natural hazard events can be classified into two broad categories: geophysical and biological. An example of the distinction between a natural hazard and a disaster is that an earthquake is the hazard which caused the 1906 San Francisco earthquake disaster. Natural hazards can be provoked or affected by anthropogenic processes, e.g. land-use change, drainage and constructio

Natural hazard - Wikipedia

The earth's crust is broken into plates. Heat rising and falling inside the mantle creates convection currents generated by radioactive decay in the core. The convection currents move the plates....
