This ground-breaking book gives an accessible overview and synthesis of current knowledge of relevance to the development of excellence in autism education. By situating understandings of autism within a 'bio-psycho-social-insider' framework, the book offers fresh insights and new ways of thinking that bring together global pedagogic practice, research, policy, and the insider perspective. Guldberg critiques current notions of Evidence-Based Practice and suggests ways of bridging the research-practice gap. She explores the interrelationship between inclusive principles, distinctive group learning needs and the individual needs of the child or young person. Eight principles of good autism practice provide a helpful framework for how education settings and practitioners can adapt classroom environments and teaching so that autistic children and young people can thrive. Written for anyone who wants to make a difference to the lives of autistic pupils, *Developing Excellence in Autism Practice* provides practitioners and students on education courses with tools for best practices, and shows how to draw on these to implement true positive change in the classroom.

James Mussell provides an accessible account of the digitization of nineteenth-century newspapers and periodicals. As studying this material is essential to understand the period, he argues that we have no choice but to engage with the new digital resources that have transformed how we access the print archive.

*Assessment in Practice* explores timely and important questions in relation to assessment. By examining the relationship between identity, culture, policy and inclusion, the book investigates the conflicted and fractured battleground of assessment, and challenges current and practiced understandings of assessment practice. The authors encourage the reader to reconceptualise assessment as a sociocultural practice. Each chapter studies a key theme in the understanding of assessment policy and practice from a sociocultural perspective and provides questions to prompt reflection on the key assessment concepts outlined in the book. Using culture as both a lens and analytic tool, the chapters examine topics such as The social order of assessment, how assessment works in the world and how learning could be assessed Perspectives on social justice and assessment, with a particular focus on social class and other potential inequalities on the experiences of assessment for young people Discussions of ability and the assessment of students with special education needs as well as the role of inclusivity in assessment practice Written by leading academics from University College Cork, the third volume in the successful Routledge Current Debates in Educational Psychology series is an essential read for researchers and postgraduate students in educational research and education psychology.

"A brilliant account" of the controversial 2005 legal battle between evolution and creationism in public education "by a first-rate journalist" (Howard Zinn). In 2004, the School Board of Dover, Pennsylvania, decided to require its ninth-grade biology students to learn intelligent design—a pseudoscientific theory positing evidence of an intelligent creator. In a case that recalled the infamous 1925 Scopes "monkey" trial, eleven parents sued the school board. When the case wound up in federal court before a President George W. Bush-appointed judge, local journalist Lauri Lebo had a front-row seat. Destined to become required reading for a generation of journalists, scientists, and science teachers, as well as for anyone concerned about the separation of church and state, *The Devil in Dover* is Lebo's acclaimed account of religious intolerance, First Amendment violations, and an assault on American science education. Lebo skillfully probes the background of the case, introducing the plaintiffs, the defendants, the lawyers, and a parade of witnesses, along with Judge John E. Jones III, who would eventually condemn the school board's decision as one of "breathtaking inanity." With the antievolution battle having moved to the state level—and the recent passage of state legislation that protects the right of schools to teach alternatives to evolution—Lebo's work is more necessary than ever. "Lebo courageously exhibits the highest standards in intellectual honesty and journalistic ethos." —Daily Kos "An unapologetic indictment of intelligent design, fundamentalist Christianity, and American journalism's insistence on objectivity in the face of clear untruths." —Columbia Journalism Review

This book provides research assistance for 99 current and provocative issues students can use to write a brief argumentative paper. \* Each jumpstart topic contains a photograph, chart, or drawing \* Bibliography collects all book and audio-video selections used in the jumpstarts, and can be used for library collections

Despite the hype about the digital revolution, traditional print forms are still very much with us. This timely book offers a reconsideration of the many complex issues surrounding the electronic representation of text now and in the future.

Based on the material presented at a conference organized by the Centre d'Océanologie of Marseille, held in 2008, this text covers a wealth of hot topics related to the way mankind interacts with the marine environment. With the state of our oceans and seas becoming an increasing source of concern worldwide, this timely addition to the debate features the latest research in both France and Japan. The book's chapters present work on many of the key areas of oceanographic study. The concept of marine biodiversity is treated, in particular how it is affected by human agency and invasive species, many of which have been introduced anthropogenically. Coastal zones are analyzed in detail, with a focus on the interaction between ports and natural environments, and the ecological and economical consequences of this relationship. A chapter on aquaculture looks at ecologically sound management as well as the preservation of resources. New and emerging technologies that aid our observation of the marine environment are covered, as is the physical, chemical, biological and biogeochemical functioning of natural and man-made environments. Featuring work by some of the leading researchers in the field from both France and Japan, this work demonstrates the strength of the links between the two scientific communities, and is an important contribution to the ongoing discussion on the effects of global warming as well as mankind's impact on the marine environment we depend on for so much.

For fans of Hidden Figures and Radium Girls comes the remarkable story of three Victorian women who broke down barriers in the medical field to become the first women doctors, revolutionizing the way women receive health care. In the early 1800s, women were dying in large numbers from treatable diseases because they avoided receiving medical care. Examinations performed by male doctors were often demeaning and even painful. In addition, women faced stigma from illness—a diagnosis could greatly limit their ability to find husbands, jobs or be received in polite society. Motivated by personal loss and frustration over inadequate medical care, Elizabeth Blackwell, Lizzie Garret Anderson and Sophie Jex-Blake fought for a woman's place in the male-dominated medical field. For the first time ever, *Women in White Coats* tells the complete history of these three pioneering women who, despite countless obstacles, earned medical degrees and paved the way for other women to do the same. Though very different in personality and circumstance, together these women built women-run hospitals and teaching colleges—creating for the first time medical care for women by women. With gripping storytelling based on extensive research and access to archival documents, *Women in White Coats* tells the courageous history these women made by becoming doctors, detailing the boundaries they broke of gender and science to reshape how we receive medical care today.
