Maintaining an open airway. If the infant is not breathing, aerating the lungs with inflation breaths. Continue ventilating apnoeic infants until respiration is established. If the heart remains less than 60 min -1 after 5 effective inflation breaths and 30 seconds of effective ventilation, start chest compressions.

Guidelines: Resuscitation and support of transition of ...

In this document, birth asphyxia is defined simply as the failure to initiate and sustain breathing at birth. Effective resuscitation at birth can prevent a large proportion of these deaths. The need for clinical guidelines on basic newborn resuscitation, suitable for settings with limited resources, is universally recognized. WHO had responded to this need by developing guidelines for this purpose that are contained in the document Basic newborn resuscitation: a practical guide.

WHO | Guidelines on basic newborn resuscitation

In October 2020, the American Heart Association published their updated recommendations for neonatal resuscitation.[1]. Clamping of the umbilical cord may be delayed for more than 30 seconds in term and preterm infants after an uncomplicated birth. Note that umbilical cord milking is not recommended for preterm infants. Prevention of Hypothermia.
