The Net Ionic Equation Lab dealt with many concepts involving ions as well as reactions. There are three types of reactions that can take place. One is a precipitation reaction that takes place when two soluble substances are mixed and form a precipitate or insoluble solid. Another is a neutralization reaction where two things react and form water.

Left is $\text{Ag}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{AgCl}(\text{s})$, in which all of the components show a change in state, from being aqueous to forming a precipitate in the solution. This is the net ionic equation; it shows only what is reacting out of the complete equation.

Net ionic equations tell us only what is actually changing during reaction. Net Ionic Equation: $\text{Cl}^-(\text{aq}) + \text{Ag}^+(\text{aq}) \rightarrow \text{AgCl}(\text{s})$ Another example is illustrated below for the reaction of nitric acid and a dilute aqueous solution of barium hydroxide (an acid-base reaction):
Molecular Equation: $2 \text{HNO}_3(\text{aq}) + \text{Ba}(\text{OH})_2(\text{aq}) \rightarrow 2 \text{H}_2\text{O}(\text{l}) + \text{Ba}(\text{NO}_3)_2(\text{aq})$
Total Ionic Equation: $2 \text{H}^+(\text{aq}) + 2 \text{NO}_3^-(\text{aq}) + \text{Ba}^{2+}(\text{aq}) + 2 \text{OH}^-(\text{aq}) \rightarrow 2 \text{H}_2\text{O}(\text{l}) + \text{Ba}^{2+}(\text{aq}) + 2 \text{NO}_3^-(\text{aq})$

The gases that were observed during the lab do not react when trying to write a chemical equation, but two of the solutions we tested, hydrochloric acid and sodium carbonate, react to produce carbon dioxide gas, even though this was not observed ($2\text{HCl}(\text{aq}) + \text{Na}_2\text{CO}_3(\text{aq}) \rightarrow 2\text{NaCl}(\text{aq}) + \text{H}_2\text{CO}_3(\text{aq})$, $\text{H}_2\text{CO}_3(\text{aq}) \rightarrow \text{H}_2\text{O}(\text{l}) + \text{CO}_2(\text{g})$). 4) Water is a polar molecule, and this causes it to be called the universal solvent.

From the balanced chemical reaction, the net ionic equation can be derived. The net ionic equation only includes the ions that participated in the reaction. It is formed by breaking down the strong acids and bases into ions, and removing the spectator ions, or the ions that did not change from the reactant side to that of the products. The remaining ions comprise what is called the net ionic equation.
