June reads: New authors bring new perspectives

Argonne-driven technology is part of a broad initiative to answer fundamental questions about the birth of matter in the universe and the building blocks that hold it all together.

"New Dark Age is among the most unsettling and illuminating books I've read about the Internet, which is to say that it is among the most unsettling and illuminating books I've read about contemporary life." – New Yorker As the world around us increases in technological complexity, our understanding of it diminishes. Underlying this trend is a single idea: the belief that our existence is understandable through computation, and more data is enough to help us build a better world. In reality, we are lost in a sea of information, increasingly divided by fundamentalism, simplistic narratives, conspiracy theories, and post-factual politics. Meanwhile, those in power use our lack of understanding to further their own interests. Despite the apparent accessibility of information, we're living in a new Dark Age. From rogue financial systems to shopping algorithms, from artificial intelligence to state secrecy, we no longer understand how our world is governed or presented to us. The media is filled with unverifiable speculation, much of it generated by anonymous software, while companies dominate their employees through surveillance and the threat of automation. In his brilliant new work, leading artist and writer James Bridle surveys the history of art, technology, and information systems, and reveals the dark clouds that gather over our dreams of the digital sublime.

Visionary thinker Jane Jacobs uses her authoritative work on urban life and economies to show us how we can protect and strengthen our culture and communities. In *Dark Age Ahead*, Jane Jacobs identifies five pillars of our culture that we depend on but which are in serious decline: community and family; higher education; the effective practice of science; taxation and government; and self-policing by learned professions. The decay of these pillars, Jacobs contends, is behind such ills as environmental crisis, racism and the growing gulf between rich and poor; their continued degradation could lead us into a new Dark Age, a period of cultural collapse in which all that keeps a society alive and vibrant is forgotten. But this is a hopeful book as well as a warning. Jacobs draws on her vast frame of reference -- from fifteenth-century Chinese shipbuilding to zoning regulations in Brampton, Ontario -- and in highly readable, invigorating prose offers proposals that could arrest the cycles of decay and turn them into beneficent ones. Wise, worldly, full of real-life examples and accessible concepts, this book is an essential read for perilous times.

When civilization collapses a father must try and repair his relationship with his children while fighting to keep them alive. In the near future all metal on earth suddenly turns to worthless piles of rust and dust. With no technology, no guns, no computers, humanity reverts to a violent feudal system. Each pocket of civilization is ruled by knights of wood & glass & concrete. This is the new Dark Age.

A field manual to the technologies that are transforming our lives Everywhere we turn, a startling new device promises to transfigure our lives. But at what cost? In this urgent and revelatory excavation of our Information Age, leading technology thinker Adam Greenfield forces us to reconsider our relationship with the networked objects, services and spaces that define us. It is time to re-evaluate the Silicon Valley consensus determining the future. We already depend on the smartphone to navigate every aspect of our existence. We're told that innovations—from augmented-reality interfaces and virtual assistants to autonomous delivery drones and self-driving cars—will make life easier, more convenient and more productive. 3D printing promises unprecedented control over the form and distribution of matter, while the blockchain stands to revolutionize everything from the recording and exchange of value to the way we organize the mundane realities of the day to day. And, all the while, fiendishly complex algorithms are operating quietly in the background, reshaping the economy, transforming the fundamental terms of our politics and even redefining what it means to be human. Having successfully colonized everyday life, these radical technologies are now conditioning the choices available to us in the years to come. How do they work? What challenges do they present to us, as individuals and societies? Who benefits from their adoption? In answering these questions, Greenfield's timely guide clarifies the scale and nature of the crisis we now confront —and offers ways to reclaim our stake in the future.

NEW YORK TIMES BESTSELLER • The bestselling author of *Morning Star* returns to the Red Rising universe with the thrilling sequel to *Iron Gold*. “Brown’s plots are like a depth charge of nitromethane dropped in a bucket of gasoline. His pacing is 100% him standing over it all with a lit match and a smile, waiting for us to dare him to drop it.”—NPR (Best Books of the Year) He broke the chains. Then he broke the world... A decade ago Darrow led a revolution, and laid the foundations for a new world. Now he’s an outlaw. Cast out of the very Republic he founded, with half his fleet destroyed, he wages a rogue war on Mercury. Outnumbered and outgunned, is he still the hero who broke the chains? Or will he become the very evil he fought to destroy? In his darkening shadow, a new hero rises. Lysander au Lune, the displaced heir to the old empire, has returned to bridge the divide between the Golds of the Rim and Core. If united, their combined might may prove fatal to the fledgling Republic. On Luna, the embattled Sovereign of the Republic, Virginia au Augustus, fights to preserve her precious democracy and her exiled husband. But one may cost her the other, and her son is not yet returned. Abducted by enemy agents, Pax au Augustus must trust in a Gray thief, Ephraim, for his salvation. Far across the void, Lyria, a Red refugee accused of treason, makes a desperate bid for freedom with the help of two unlikely new allies. Fear dims the hopes of the Rising, and as power is seized, lost, and reclaimed, the worlds spin on and on toward a new Dark Age. Don’t miss any of Pierce Brown’s Red Rising Saga: **RED RISING • GOLDEN SON • MORNING STAR • IRON GOLD • DARK AGE**

Original introduction by Warren Ellis, author of *Transmetropolitan* and *Gun Machine* Who are these bold rebels pillaging their European neighbors in the name of revolution? The Futurists! Utopian pirate-warriors of the tiny Regency of Carnaro, unlikely scourge of the Adriatic Sea. Mortal enemies of communists, capitalists, and even fascists (to whom they are not entirely unsympathetic). The ambitious Soldier-Citizens of Carnaro are led by a brilliant and passionate coterie of the perhaps insane. Lorenzo Secondari, World War I veteran, engineering genius, and leader of Croatian raiders. Frau Piffer, Syndicalist manufacturer of torpedos at a factory run by and for women. The Ace of Hearts, a dashing Milanese aristocrat, spymaster, and tactical savant. And the Prophet, a seductive warrior-poet who leads via free love and military ruthlessness. Fresh off of a worldwide demonstration of their might, can the Futurists engage the aid of sinister American traitors and establish world domination?

The climate futurist presents a sobering analysis of America's future in the face of climate change—and how we can prepare to make the most of it. After decades of missed opportunities, the door to a sustainable future has closed, and the future we face now is one in which today's industrial civilization unravels in the face of uncontrolled climate change and resource depletion. What is the world going to look like when all these changes have run their course? John Michael Greer seeks to answer this question, using a clear-eyed analysis of ecology, economics, and history to discern what the next 500 years or so might look like. As globalization ends, the United States—and Western civilization—will enter the stages of decline and fall. Though *Dark Age America* offers an uncompromising assessment of our collective future, it is by no means without hope. Knowing where we're headed is a crucial step in responding to the challenges of the future and doing what we can now to help our descendants make the most of the world we're leaving them.

What is the function of art in the era of digital globalization? How can one think of art institutions in an age defined by planetary civil war, growing inequality, and proprietary digital technology? The boundaries of such institutions have grown fuzzy. They extend from a region where the audience is pumped for tweets to a future of “neurocurating,” in which paintings surveil their audience via facial recognition and eye tracking to assess their popularity and to scan for suspicious activity. In *Duty Free Art*, filmmaker and writer Hito Steyerl wonders how we can appreciate, or even make art, in the present age. What can we do when arms manufacturers sponsor museums, and some of the world's most valuable artworks are used as currency in a global futures market detached from productive work? Can we distinguish between information, fake news, and the digital white noise that bombards our everyday lives? Exploring subjects as diverse as video games, WikiLeaks files, the proliferation of freeports, and political actions, she exposes the paradoxes within globalization, political economies, visual culture, and the status of art production.
