'Supply Chain Management' illustrates the key drivers of good supply chain management in order to help students understand what creates a competitive advantage. It also provides strong coverage of analytic skills so that students can gauge the effectiveness of the techniques described.

When it comes to delivering product design innovations to mobile device users, Nokia is the yardstick by which all others are judged. Now the process and working methods that have enabled Nokia to revolutionize usability are fully explained for the first time in this beautiful, four-color book. Aiming to bridge the gap between theory and application, this work focuses on strategic management.

Have you ever come up with an idea for a new product or service but didn't take any action because you thought it would be too risky? Or at work, have you had what you thought could be a big idea for your company—perhaps changing the way you develop or distribute a product, provide customer service, or hire and train your employees? If you have, but you haven't known how to take the next step, you need to understand what the authors call the innovator's method—a set of tools emerging from lean start-up, design thinking, and agile software development that are revolutionizing how new ideas are created, refined, and brought to market. To date these tools have helped entrepreneurs, designers, and software developers manage uncertainty—through cheap and rapid experiments that systematically lower failure rates and risk. But many managers and leaders struggle to apply these powerful tools within their organizations, as they often run counter to traditional managerial thinking and practice. Authors Nathan Furr and Jeff Dyer wrote this book to address that very problem. Following the breakout success of *The Innovator's DNA*—which Dyer wrote with Hal Gregersen and bestselling author Clay Christensen to provide a framework for generating ideas—this book shows how to make those ideas actually happen, to commercialize them for success. Based on their research inside corporations and successful start-ups, Furr and Dyer developed the innovator's method, an end-to-end process for creating, refining, and bringing ideas to market. They show when and how to apply the tools of their method, how to adapt them to your business, and how to answer commonly asked questions about the method itself, including: How do we know if this idea is worth pursuing? Have we found the right solution? What is the best business model for this new offering? This book focuses on the "how"—how to test, how to validate, and how to commercialize ideas with the lean, design, and agile techniques successful start-ups use. Whether you're launching a start-up, leading an established one, or simply working to get a new product off the ground in an existing company, this book is for you.

Covers the strategic management topics in cost accounting. This title helps students to understand about the management and the role of cost accounting in helping an organization succeed. It addresses issues such as: How does a firm compete? and What type of cost management information is needed for a firm to succeed?

Despite the fact that experts acknowledge the importance of the emerging markets, there is a dearth of real case studies specially focussed on marketing issues. This case study book addresses that need. It is also important and timely in providing a framework for instructors and researchers (both academic and industry) to understand the dynamics occurring in emerging markets. This book is composed of long and short real cases with varying complexity in different sectors including airlines, hotel, fashion, etc. These will cover issues which are unique to the emerging markets (including the BRIC countries) to understand the dynamics occurring in these countries. With its case studies, collection of questions, and real-life marketing examples, this book offers unique benefits to marketing students and educators across the world. A must-have for every marketing course module.?
