In perhaps the most creative and authoritative book on selling brands ever written, international business experts Keith Lincoln, Anthony Aconis and Lars Thomassen, reveal how the world's most successful brands sell themselves to today's increasingly demanding shoppers and retailers. As the world of mass communications evolves into the world of media of the masses the very concept of the brand is transforming - from branding to the shelf to branding from the shelf. Two years in the analysis Retailization is the largest study ever conducted on how corporations and their brands are dealing (or not dealing) with this new era. The study covering over twenty countries worldwide and interviews with some of the leading brand marketers has drawn on countless examples of both creative execution and retail impact. Retailization shows how to establish a business approach that can better meet the needs of today's shopping Kings and Queens by creating and activating revolutionary selling situations. The central thesis of this book is that corporations must undertake nothing less than a radical reinvention of how they reach their customers to sell their products. The shelf where products are sold is the new centre of the business and communications universe. The answer to how to get the most from this change lies in a radically new business philosophy - RETAILIZATION. Retailization presents an innovative and pragmatic step by step process to help businesses rethink, reimagine and restructure their entire business and brand efforts around the retail strategies and executions that can better meet the needs of today's shopping Kings and Queens. Research shows that we have as little as four seconds to get a shopper's attention. The authors explain what you need to do to guarantee that you own that four seconds from understanding your competitive arena and context to understanding the nature of today's shopper. From there they explain how you can optimize the creation of your products, your retail impact and your communications. Finally, they demonstrate how to activate the process through retailizing your entire organization from top to bottom and we how to verify the results.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

At Dwell, we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect, to own furniture and products that are exceptionally well designed, and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

Foreword. A transformed scientific method. Earth and environment. Health and wellbeing. Scientific infrastructure. Scholarly communication.

The tranquility of Mars is disrupted by humans who want to conquer space, colonize the planet, and escape a doomed Earth.

How did life evolve on Earth? The answer to this question can help us understand our past and prepare for our future. Although evolution provides credible and reliable answers, polls show that many people turn away from science, seeking other explanations with which they are more comfortable. In the book *Science, Evolution, and Creationism*, a group of experts assembled by the National Academy of Sciences and the Institute of Medicine explain the fundamental methods of science, document the overwhelming evidence in support of biological evolution, and evaluate the alternative perspectives offered by advocates of various kinds of creationism, including "intelligent design." The book explores the many fascinating inquiries being pursued that put the science of evolution to work in preventing and treating human disease, developing new agricultural products, and fostering industrial innovations. The book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes. Mindful of school board battles and recent court decisions, *Science, Evolution, and Creationism* shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith. For educators, students, teachers, community leaders, legislators, policy makers, and parents who seek to understand the basis of evolutionary science, this publication will be an essential resource.
