A Review of API MPMS Chapter 14.3 / AGA Report No. 3 - Part 2 tapped orifice meters. To accurately use this coefficient, the orifice meter must be manufactured to the specifications of AGA 3/API 14.3. Basically, the coefficient of discharge depends on the Reynolds number, sensing tap location, meter tube diameter and orifice diameter with a few other minor influences. Each coefficient of discharge applies to

White Paper: Fundamentals of Orifice Meter Measurement API MPMS Ch.14.3/AGA Report No. 3, Part 3, with existing equipment is recommended, since these represent significant improvements over the previous methods. The uncertainty levels for flow measurement using existing equipment may be different from those quoted in API MPMS Chapter 14.3.1/AGA Report No. 3, Part 1. Use of orifice meters at the extremes of their diameter ratio (
