The first section of this research based but practical book has been updated to examine the most recent research in two key areas: dyslexia and the dyslexic experience and the major cognitive and learning styles. In the light of increased controversy around the use of learning style theory in the educational arena, suggestions are made as to ways in which these theories can be utilized to inform teaching and learning and maximize success for vulnerable learners. The second section provides a range of ways in which to enable learners to understand and utilize their individual styles along with techniques to help students to absorb, process and create responses to information across the curriculum; practical strategies to help teachers to adapt material to suit differing ways of learning and activities to help students to become more flexible and successful in their approach.

The Way to Vibrant Health, now in its 3rd printing, represents over 20 years of Bioenergetic body-psychotherapy techniques. These unique exercises are designed to reduce muscular tension and promote well-being, allowing you to feel more joy and vibrancy. Bioenergetics is a way of understanding the human personality in terms of the body and its energetic processes. Bioenergetic Analysis is a form of psychotherapy that combines work with the mind and the body to help people resolve their emotional problems, and realize their potential for vibrant health and pleasure in all aspects of their lives. Bioenergetic Exercises help you experience: Natural breathing as a total body respiratory wave. Unblocking of the body's holding patterns that restrict your energetic potential. Increasing your capacity for pleasure and feeling.

Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana.
