C is constant so we can say that frequency times wavelength of one wave has to equal frequency times wavelength of another. So let's say wave B has a wavelength of 1 meter and frequency of 2 Hz. If we double the wavelength for A to 2 meters, then A's frequency must be 1/2 of what it was, so 1 Hz. 1 meter x 2 Hz = 2 meters x 1 Hz

Conceptual Physics POGIL: Waves When oscillators, be they pendulums, masses vibrating on springs, or electrons in an atom, are linked together, the motion of one affects the motions of the others. We say that the oscillators are coupled. When this is the case, we often see a repeated pattern that moves through the oscillators.

Pogil Waves Answers - www.krausypoo.com Refer to the example at the top. All of these problems have to do with using Newton's Second Law (F=ma) to determine weight and mass. If you have any objects mass (in kg) then multiply it by the acceleration due to gravity (g=10m/s^2) to calculate the Force of gravity (the weight in Newtons).

A vibrating guitar string generates sound waves. These sound waves are disturbances that can transport energy without transporting matter. Each molecule of air bumps into it's neighboring particle to pass the energy at great speeds without the individual particles moving far from their original location.

P waves are like the lightning, and S waves are like the thunder. The P waves travel faster and shake the ground where you are first. Then the S waves follow and shake the ground also. If you are close to the earthquake, the P and S wave will come one right after the other, but if you are far away, there will be more time between the two.
