Introduction. If you're a developer building web applications with the Laravel PHP web framework, you may need your app to interact with a PostgreSQL database. This multi-part series will take you through the process of building a web app that uses both Laravel and PostgreSQL. In this first installment of the series, we'll show you how to set up the development environment needed for creating a Laravel and PostgreSQL web app on a local machine.

Once the Laravel project directory is opened, we'll modify database.php by going in the config folder as shown in the image below: We can see that PostgreSQL defaulted to mysql. Let's change that to pgsql so that PostgreSQL will work in Laravel. Next, we'll need to configure our database credentials in Laravel by updating the .env file:

Server. You may use the `DB_*` configuration options in your `.env` configuration file to configure your database settings, such as ... Lumen may also utilize the Laravel fluent query builder. To learn more about this feature, consult the full Laravel documentation ...

Database - Lumen - PHP Micro-Framework By Laravel

Getting Started. Laravel is a free, open-source PHP web framework, created by Taylor Otwell and intended for the development of web applications following the model–view–controller architectural pattern and based on Symfony. The aim of the laravel framework is to take the pain out of development by making common tasks used in web development, such as authentication, routing, sessions, and caching a much easy ride.

Laravel - Laravel(5.7) Tutorial - w3resource

When you set the `balance` option to `false`, the default Laravel behavior is used, this processes queues in the order they are listed in your configuration. Job Trimming The `horizon` configuration file will allow you to configure how long recent and failed jobs should be persisted (in minutes).
